Electric, Heated, Plural Component Proportioner

For spraying polyurethane foam and polyurea coatings. Not for use in explosive atmospheres.

See Models and Maximum Working Pressures on page 3.

Manual Conventions

Warning

A warning alerts you to possible serious injury or death if you do not follow instructions.

Symbols, such as fluid injection (shown), alert you to a specific hazard and direct you to read the indicated hazard warnings on pages 5-6.

Caution

A caution alerts you to possible equipment damage or destruction if you do not follow instructions.

Note

A note indicates additional helpful information.
**WARNING**

**SKIN INJECTION HAZARD**

High-pressure fluid from gun, hose leaks, or ruptured components will pierce skin. This may look like just a cut, but it is a serious injury that can result in amputation. **Get immediate surgical treatment.**

- Do not point the gun at anyone or at any part of the body.
- Do not put your hand or fingers over the gun fluid nozzle.
- Do not stop or deflect leaks with your hand, body, glove, or rag.
- Do not “blow back” fluid; this is not an air spray system.
- Follow **Pressure Relief Procedure**, page 32, when you stop spraying and before cleaning, checking, or servicing equipment.
- Use lowest possible pressure when flushing, priming, or troubleshooting.
- Engage spray gun piston safety lock when not spraying.
- Tighten all fluid connections before operating the equipment.
- Check hoses, tubes, and couplings daily. Replace worn or damaged parts immediately. High pressure hose cannot be recoupled; replace the entire hose.

**FIRE, EXPLOSION AND ELECTRIC SHOCK HAZARD**

Solvent and fumes in work area can ignite or explode. High voltage components can cause electric shock. To help prevent fire, explosion, and electric shock:

- Shut off main power switch and wait 5 minutes before opening Reactor cabinet door.
- All electrical wiring must be done by trained and qualified personnel and comply with all local codes.
- Ground equipment and conductive objects. See **Ground system**, page 24.
- Use equipment only in well ventilated area.
- Eliminate all ignition sources, such as pilot lights, cigarettes and plastic drop cloths (potential static arc).
- Do not plug or unplug power cords or turn lights on or off when flammable fumes are present.
- Keep the work area free of debris, including solvent, rags, and gasoline.
- Hold gun firmly to side of grounded pail when triggering into pail.
- Use only grounded hoses.
- If there is static sparking or you feel a shock, **stop operation immediately**. Do not use equipment until you identify and correct the problem.
- To avoid chemical reaction and explosion, do not use 1,1,1-trichloroethane, methylene chloride, other halogenated hydrocarbon solvents or fluids containing such solvents in pressurized aluminum equipment.
EQUIPMENT MISUSE HAZARD
Misuse can cause serious injury or death.
• For professional use only.
• Use equipment only for its intended purpose. Call your Graco distributor for information.
• Read manuals, warnings, tags, and labels before operating equipment. Follow instructions.
• Check equipment daily. Repair or replace worn or damaged parts immediately.
• Do not alter or modify equipment. Use only Graco parts and accessories.
• Do not exceed the maximum working pressure or temperature rating of the lowest rated system component. See Technical Data in all equipment manuals.
• Use fluids and solvents that are compatible with equipment wetted parts. See Technical Data in all equipment manuals. Read fluid and solvent manufacturer's warnings.
• Route hoses and cables away from traffic areas, sharp edges, moving parts, and hot surfaces.
• Do not use hoses to pull equipment.
• Comply with all applicable safety regulations.

BURN HAZARD
This equipment is used with heated fluid, which can cause equipment surfaces to become very hot. To avoid severe burns:
• Do not touch hot fluid or equipment.
• Allow equipment to cool completely before touching it.
• Wear gloves if fluid temperature exceeds 110°F (43°C).

TOXIC FLUID OR FUMES HAZARD
Toxic fluids or fumes can cause serious injury or death if splashed in the eyes or on skin, inhaled, or swallowed.
• Read Material Safety Data Sheet (MSDS) to know the specific hazards of the fluids you are using.
• Store hazardous fluid in approved containers, and dispose of it according to applicable guidelines.

PERSONAL PROTECTIVE EQUIPMENT
You must wear proper protective equipment when operating, servicing, or when in the operating area of the equipment to help protect you from serious injury, including eye injury; inhalation of toxic fumes; and hearing loss. This equipment includes but is not limited to:
• Protective eyewear.
• Gloves, clothing, and respirator as recommended by the fluid and solvent manufacturer.
• Hearing protection.

Detail of Reactor Fluid Manifold

Fig. 3: Component Identification
Temperature Controls and Indicators

FIG. 4. Temperature Controls and Indicators
Temperature Controls and Indicators

Main Power Switch
Located on right side of unit, page 9. Turns Reactor power ON and OFF. Does not turn heater zones or pumps on.

Red Stop Button
Located between temperature control panel and motor control panel, page 9. Press to shut off motor and heater zones only. Use main power switch to shut off all power to unit.

Actual Temperature Key/LED
Press to display actual temperature.

Target Temperature Key/LED
Press to display target temperature.

Temperature Scale Keys/LEDs
Press or to change temperature scale.

Heater Zone On/Off Keys/LEDs
Press to turn heater zones on and off. Also clears heater zone diagnostic codes, see page 36.

LEDs are on steady when heater zones are powering up. Begin flashing as heat reaches targets.

LEDs will also flash if cutback point is reached.

Temperature Arrow Keys
Press , then press or to adjust temperature settings in 1 degree increments.

Temperature Displays
Show actual temperature or target temperature of heater zones, depending on selected mode. Defaults to actual at startup. Range is 32-190°F (0-88°C) for A and B, 32-180°F (0-82°C) for hose.

WARNING
Read warnings, page 5.

Located inside Reactor cabinet.

For wiring and cabling, see repair manual.
Motor Controls and Indicators

Pressure Arrow Keys
Motor ON/OFF Key
PARK Key
Pressure Key
Cycle Count Key
Pressure/Cycle Display
PSI/BAR Keys

FIG. 5. Motor Controls and Indicators
Motor ON/OFF Key/LED
Press \( \bigcirc \) to turn motor ON and OFF. Also clears some motor control diagnostic codes, see page 36.

PARK Key/LED
Press \( \bigcirc \) at end of day to cycle component A pump to home position, submerging displacement rod. Trigger gun until pump stops. Once parked, motor will automatically shut off.

PSI/BAR Keys/LEDs
Press \( \text{PSI} \) or \( \text{BAR} \) to change pressure scale.

Pressure Key/LED
Press \( \text{Clock} \) to display fluid pressure.

If pressures are imbalanced, display shows higher of two pressures.

Cycle Count Key/LED
Press \( \bigcirc \) to display cycle count.

To clear counter, press and hold \( \bigcirc \) for 3 sec.

Pressure Arrow Keys
Press \( \uparrow \) or \( \downarrow \) to adjust fluid pressure when motor is ON. Setpoint displays for 10 sec.

When motor is OFF, pressing \( \uparrow \) will enter jog mode.

To exit jog mode, press \( \downarrow \) until display shows dashes or current pressure.

Pressure/Cycle Display
Shows fluid pressure or cycle count, depending on mode selected.

Displays J 1 through J 10 when in jog mode, page 35.
Moisture Sensitivity of Isocyanates

Isocyanates (ISO) are catalysts used in two component foam and polyurea coatings. ISO will react with moisture (such as humidity) to form small, hard, abrasive crystals, which become suspended in the fluid. Eventually a film will form on the surface and the ISO will begin to gel, increasing in viscosity. If used, this partially cured ISO will reduce performance and the life of all wetted parts.

- Keep the wet-cup of the pump filled with Graco ISO pump oil, Part No. 217374. The lubricant creates a barrier between the ISO and the atmosphere.
- Use moisture resistant hoses. The component A (ISO) hose must be constructed of polyethylene (PE), PTFE, polyolefin, or moisture-proof rubber compounds.
- Never use reclaimed solvents, which may contain moisture. Always keep solvent containers closed when not in use.
- Always park component A pump when you shut-down, see page 13.

To prevent exposing ISO to moisture:

- Always use a sealed container with a desiccant dryer in the vent, or a "nitrogen blanket." **Never** store ISO in an open container.
- Keep the wet-cup of the pump filled with Graco ISO pump oil, Part No. 217374. The lubricant creates a barrier between the ISO and the atmosphere.
- Use moisture resistant hoses. The component A (ISO) hose must be constructed of polyethylene (PE), PTFE, polyolefin, or moisture-proof rubber compounds.
- Never use reclaimed solvents, which may contain moisture. Always keep solvent containers closed when not in use.
- Always park component A pump when you shut-down, see page 13.

Spray Adjustments

Flow rate, atomization, and amount of overspray are affected by four variables.

- **Fluid pressure setting.** Too little pressure results in an uneven pattern, coarse droplet size, low flow, and poor mixing. Too much pressure results in excessive overspray, high flow rates, difficult control, and excessive wear.

- **Fluid temperature.** Similar effects to fluid pressure setting. The A and B temperatures can be offset to help balance the fluid pressure.

- **Mix chamber size.** Choice of mix chamber is based on desired flow rate and fluid viscosity.

- **Cleanoff air adjustment.** Too little cleanoff air results in droplets building up on the front of the nozzle, and no pattern containment to control overspray. Too much cleanoff air results in air-assisted atomization and excessive overspray.
Setup

1. Locate Reactor

a. Locate Reactor on a level surface.

b. Do not expose Reactor to rain.

c. To mount on a truck bed, secure rear axle with 15B805 Mobile Mounting Bracket (MB), available separately. Bolt bracket and mounting feet (MF) of Reactor to truck bed.

2. Electrical requirements

See Table 1.

**WARNING**

Installing this equipment requires access to parts which may cause electric shock or other serious injury if work is not performed properly. Have a qualified electrician connect power and ground to main power switch terminals, see page 17. Be sure your installation complies with all National, State and Local safety and fire codes.

</table>

a. 230V, 1 phase: Using 5/32 or 4 mm hex allen wrench, connect two power leads to L1 and L2. Connect green to ground (GND).
b. **230V, 3 phase:** Using 5/32 or 4 mm hex allen wrench, connect three power leads to L1, L2, and L3. Connect green to ground (GND).

C. **380V, 3 phase:** Using 5/32 or 4 mm hex allen wrench, connect three power leads to L1, L2, and L3. Connect neutral to N. Connect green to ground (GND).
4. Connect feed pumps
   
a. Install feed pumps (K) in component A and B supply drums. See Fig. 1 and Fig. 2, pages 7 and 8.

b. Seal component A drum and use desiccant dryer (M) in vent.

c. Install agitator (L) in component B drum, if necessary.

d. Connect supply hoses (J) from feed pumps to Reactor fluid inlet valves (FV).

5. Connect pressure relief lines

   ![Warning Icon]

   **WARNING**
   Do not install shutoffs downstream of the PRESSURE RELIEF/SPRAY valve outlets (BA, BB). The valves function as overpressure relief valves when set to SPRAY. Lines must be open so valves can automatically relieve pressure when machine is operating.

   If circulating fluid back to the supply drums, use high pressure hose rated to withstand the maximum working pressure of this equipment.

   a. **Recommended**: Connect high pressure hose (R) to relief fittings (BA, BB) of both PRESSURE RELIEF/SPRAY valves, Route hose back to component A and B drums. See Fig. 1, page 7.

   ![Diagram of hose connection]

   b. **Alternately**: Secure supplied bleed tubes (N) in grounded, sealed waste containers (H). See Fig. 2, page 8.
6. Install Fluid Temperature Sensor (FTS)

The Fluid Temperature Sensor (FTS) is supplied. Install FTS between main hose and whip hose.

**CAUTION**

To prevent damage to probe, do not kink or excessively bend whip hose. Do not coil hose tighter than the minimum bend radius of 3 ft (0.9 m). Do not subject hose to excessive weight, impact, or other abuse.

- **a.** Carefully extend FTS probe (S). Do not bend or kink probe. Insert in component A (ISO) side of main hose (B).
- **b.** Connect FTS (C) to whip hose (D).
- **c.** Connect whip hose ground wire (U) to ground screw on underside of FTS.
- **d.** Connect main hose (B) to FTS (C).
- **e.** Connect electrical connectors (V). Secure connections with plastic ties (W).
- **f.** Connect air hose (F) to whip air hose (X).
- **g.** Connect main hose cable (Y) to FTS. Slide insulator sleeves over connection. Leave slack (Z) in cables as stress relief, to prevent cable failure.

**Fig. 6. Install Fluid Temperature Sensor (FTS)**

7. Connect heated hose

See 309572 for detailed instructions for Graco heated hoses.

**CAUTION**
The fluid temperature sensor (FTS) and whip hose must be used with heated hose, see page 20. Hose length, including whip hose, must be 60 ft (18.3 m) minimum.

a. Turn main power OFF.

b. Assemble heated hose sections, FTS, and whip hose.

c. Connect A and B hoses to A and B outlets on Reactor fluid manifold (FM). Hoses are color coded: red for component A (ISO), blue for component B (RES). Fittings are sized to prevent connection errors.

Manifold hose adapters (N, P) allow use of 1/4 in. and 3/8 in. ID fluid hoses. To use 1/2 in. (13 mm) ID fluid hoses, remove adapters from fluid manifold and install as needed to connect whip hose.

8. Close gun fluid manifold valves A and B

9. Connect whip hose to gun fluid manifold

Do not connect manifold to gun.

10. Pressure check hose

See hose manual. Pressure check for leaks. If no leaks, wrap hose and electrical connections to protect from damage.
11. Set transformer wire taps

**WARNING**
Read warnings, page 5.

Turn main power switch OFF. Transformer tap wire connections vary depending on length of heated hose. See Fig. 7 and Fig. 8. Verify that tap wire connections are correct.

<table>

12. Ground system

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Read warnings, page 5.</td>
</tr>
</tbody>
</table>

**a.** Reactor: is grounded through power cord. See page 17.

**b.** Spray gun: connect whip hose ground wire to FTS, page 20. Do not disconnect wire or spray without whip hose.

**c.** Fluid supply containers: follow your local code.

**d.** Object being sprayed: follow your local code.

**e.** Solvent pails used when flushing: follow your local code. Use only metal pails, which are conductive, placed on a grounded surface. Do not place pail on a nonconductive surface, such as paper or cardboard, which interrupts grounding continuity.

**f.** To maintain grounding continuity when flushing or relieving pressure, hold a metal part of spray gun firmly to the side of a grounded metal pail, then trigger gun.
13. Supply wet-cups with Throat Seal Liquid

**WARNING**

Pump rod and connecting rod move during operation. Moving parts can cause serious injury such as pinching or amputation. Keep hands and fingers away from wet-cup during operation. Turn main power OFF before filling wet cup.

a. **Component A (ISO) Pump:** Keep reservoir (R) filled with Graco Throat Seal Liquid (TSL), Part No. 206995. Wet-cup piston circulates TSL through wet-cup, to carry away isocyanate film on displacement rod.

b. **Component B (Resin) Pump:** Check felt washers in packing nut/wet-cup (R) daily. Keep saturated with Graco Throat Seal Liquid (TSL), Part No. 206995, to prevent material from hardening on displacement rod. Replace felt washers when worn or contaminated with hardened material.
Startup

WARNING
Do not operate Reactor without all covers and shrouds in place.

1. Fluid Temperature Sensor (FTS) Calibration

Calibrate the FTS ONLY at initial startup (the first time the unit is operated) and any time the hose length changes.

a. Before turning on the unit, ensure all hoses and cables are properly connected. To ensure that the FTS in the hose is at the same temperature as the heaters, keep heat off and store the hose FTS near the machine for several minutes.

b. While holding down the temperature unit button (Fahrenheit - “F” or Celsius - “C”) turn the Reactor main power ON.

c. Hold the temperature unit button until temperature is shown on the display. The fluid temperature sensor is now correctly calibrated.

d. Open fluid inlet valves (FV).

e. Start feed pumps.

WARNING
Always provide two grounded waste containers to keep component A and component B fluids separate.

f. Hold gun fluid manifold over two grounded waste containers. Open fluid valves A and B until clean, air-free fluid comes from valves. Close valves.

2. Load fluid with feed pumps

The Reactor is tested with oil at the factory. Flush out the oil with a compatible solvent before spraying. See page 37.

a. Check that Setup steps 1-13 are complete, pages 16-25.

b. Turn on component B agitator, if used.
3. **Set temperatures**

**WARNING**

This equipment is used with heated fluid, which can cause equipment surfaces to become very hot. To avoid severe burns:

- Do not touch hot fluid or equipment.
- Allow equipment to cool completely before touching it.
- Wear gloves if fluid temperature exceeds 110°F (43°C).

a. Turn main power ON.

b. Press F or C to change temperature scale.

c. Press .

d. To set A heat zone target temperature, press or until display shows desired temperature. Repeat for B and C zones.

For C zone only, if FTS is disconnected at startup, display will show hose current (0A). See step h, page 28.

e. Press to display actual temperatures.

**WARNING**

Read warnings, page 5. Do not turn on hose heat without fluid in hoses.

f. Turn on heat zone by pressing . Preheat hose (15-60 min). Indicator will flash very slowly when fluid reaches target temperature. Display shows actual fluid temperature in hose near FTS.

**WARNING**

Read warnings, page 5. Thermal expansion can cause overpressurization, resulting in equipment rupture and serious injury, including fluid injection. Do not pressurize system when preheating hose.

g. Turn on A and B heat zones by pressing for each zone.
h. Manual current control mode only:

If FTS is disconnected or display shows diagnostic code E04, turn main power switch OFF then ON to clear diagnostic code and enter manual current control mode. Display will show current to hose. Current is not limited by target temperature.

To prevent overheating, install hose thermometer close to gun end, within operator view. Insert thermometer through foam cover of A component hose so stem is next to inner tube. Thermometer reading will be about 20°F less than actual fluid temperature.

If thermometer reading exceeds 160°F (71°C), reduce current with key.

4. Set pressure

a. Press .

c. Press or until display shows desired fluid pressure. Display will show setpoint for 10 sec, then change to actual pressure.

If display pressure is greater than setpoint pressure, trigger gun to reduce pressure.

If display shows J xx, unit is in jog mode. To exit jog mode, see page 35.

d. To display cycle count, press .

To clear counter, press and hold for 3 sec.

e. Press or to change pressure scale.
Spraying

1. Engage gun piston safety lock.

2. Close gun fluid manifold valves A and B.

3. Attach gun fluid manifold. Connect gun air line. Open air line valve.

4. Set PRESSURE RELIEF/SPRAY valves (SA, SB) to SPRAY.

5. Check that heat zones are on and temperatures are on target, page 27.

6. Press motor to start motor.
7. Check fluid pressure display and adjust as necessary, page 28.

8. Check fluid pressure gauges (GA, GB) to ensure proper pressure balance. If imbalanced, see repair manual.

9. Open gun fluid manifold valves A and B.

10. Disengage gun piston safety lock.

11. Test spray onto cardboard for several seconds, to allow Reactor to adjust motor speed as required for gun mix chamber nozzle. Adjust pressure and temperature to get desired results.

12. Equipment is ready to spray.
Shutdown

1. Shut off A, B, and Q heat zones.

2. Park component A pump.
   a. Press A.
   b. Trigger gun until pump A stops. After fluid pressure drops below 700 psi (4.9 MPa, 49 bar), motor will run until component A pump is at bottom of its stroke, then shut off.
   c. Fill wet-cups, page 25.

3. Turn main power OFF.

4. Relieve pressure, page 32.
Pressure Relief Procedure

1. Relieve pressure in gun and perform gun shutdown procedure. See gun manual.

2. Close gun fluid manifold valves A and B.

3. Shut off feed pumps and agitator, if used.

4. Turn PRESSURE RELIEF/SPRAY valves (SA, SB) to PRESSURE RELIEF. Route fluid to waste containers or supply tanks. Ensure gauges drop to 0.

5. Engage gun piston safety lock.

6. Disconnect gun air line and remove gun fluid manifold.
Fluid Circulation

Circulation Through Reactor

**WARNING**

Read warnings, page 5. Do not circulate fluid containing a blowing agent without consulting with your material supplier regarding fluid temperature limits.

To circulate through gun manifold and preheat hose, see page 34.

**WARNING**

Do not install shutoffs downstream of the PRESSURE RELIEF/SPRAY valve outlets (BA, BB). The valves function as overpressure relief valves when set to SPRAY. Lines must be open so valves can automatically relieve pressure when machine is operating.

2. Route circulation lines back to respective component A or B supply drum. Use hoses rated at the maximum working pressure of this equipment. See Fig. 1, page 7.

3. Set PRESSURE RELIEF/SPRAY valves (SA, SB) to PRESSURE RELIEF.

4. Turn main power ON.

5. Set temperature targets, see page 27. Turn on A and B heat zones by pressing . **Do not** turn on heat zone unless hoses are already loaded with fluid.

6. Press to display actual temperatures.

7. Circulate fluid in jog mode (see page 35) until A and B temperatures reach targets.

8. Turn on heat zone by pressing .

9. Set PRESSURE RELIEF/SPRAY valves (SA, SB) to SPRAY.
Circulation Through Gun Manifold

**WARNING**
Read warnings, page 5. Do not circulate fluid containing a blowing agent without consulting with your material supplier regarding fluid temperature limits.

Circulating fluid through the gun manifold allows rapid preheating of hose.

1. Install gun fluid manifold (P) on Part No. 246362 accessory circulation kit (W).

2. Connect high pressure circulation lines (R) to circulation manifold. Route circulation lines back to respective component A or B supply drum. Use hoses rated at the maximum working pressure of this equipment.

4. Turn main power ON.

5. Set temperature targets, see page 27. Turn on heat zones by pressing.

6. Press to display actual temperatures.

7. Circulate fluid only in jog mode (see page 35) until temperatures reach targets.
Jog Mode

Jog mode has two purposes:

- It can speed fluid heating during circulation
- It can make pump repair/replacement easier. See repair manual.

1. Turn main power ON.
2. Check that motor is OFF (LED is off; display may show dashes or pressure).

3. Press to select J 1 (jog speed 1).
4. Press motor to start motor.
5. Press or to change jog speed (J 1 through J 10).

Jog speeds correlate to 3-30% of motor power, but will not operate over 700 psi (4.9 MPa, 49 bar) for either A or B.

6. To exit jog mode, press until display shows dashes or current pressure.
Diagnostic Codes

Temperature Control Diagnostic Codes

Temperature control diagnostic codes E01 through E05 appear on temperature display.

These alarms turn off heat. Turn main power OFF then ON to clear.

See repair manual for corrective action.

<table>
<thead>
<tr>
<th>Code No.</th>
<th>Code Name</th>
<th>Alarm Zone</th>
</tr>
</thead>
<tbody>
<tr>
<td>01</td>

<td>FTS or thermocouple not connected</td>
<td>Individual</td>
</tr>
<tr>
<td>05</td>
<td>Board overtemperature</td>
<td>All</td>
</tr>
</tbody>
</table>

For hose zone only, if FTS is disconnected at startup, display will show hose current 0A.

Motor Control Diagnostic Codes

Motor control diagnostic codes E21 through E29 appear on pressure display.

There are two types of motor control codes: alarms and warnings. Alarms take priority over warnings.

See repair manual for corrective action.

Alarms

Alarms turn off Reactor. Turn main power OFF then ON to clear.

Alarms can also be cleared, except for code 23, by pressing .

Maintenance

- Check wet-cup TSL supply daily, page 25.
- Do not overtighten packing nut/wet-cup. Throat u-cup is not adjustable.
- Keep component A from exposure to moisture in atmosphere, to prevent crystallization.
- Remove plug (S) and clean fluid inlet screens as needed.

Flush out old fluid with new fluid, or flush out old fluid with a compatible solvent before introducing new fluid.

Flush entire system, circulate through gun fluid manifold (with manifold removed from gun).

Always leave some type of fluid in system. Do not use water.

Flushing

WARNING
Read warnings, page 5. Flush equipment only in a well-ventilated area. Do not spray flammable fluids. Do not turn on heaters while flushing with flammable solvents.

- Use the lowest possible pressure when flushing.
- All fluid components are compatible with common solvents. Use only moisture-free solvents.

To flush feed hoses, pumps, and heaters separately from heated hoses, set PRESSURE RELIEF/SPRAY valves (SA, SB) to PRESSURE RELIEF. Flush through bleed lines (N).

Clean gun mix chamber ports regularly. See gun manual.

Clean gun check valve screens regularly. See gun manual.

Use compressed air to prevent dust buildup on control boards, fan, and motor (under shield).
Accessories

Feed Pump Kits
Pumps, hoses, and mounting hardware to supply fluids to Reactor. Includes 246483 Air Supply Kit. See 309815.

246483 Air Supply Kit
Hoses and fittings to supply air to feed pumps, agitator, and gun air hose. Included in feed pump kits. See 309827.

246978 Circulation Kit
Return hoses and fittings to make circulation system. Includes two 246477 Return Tube Kits. See 309852.

246477 Return Tube Kit
Desiccant dryer, return tube, and fittings for one drum. Two included in 246978 Circulation Kit. See 309852.

248669 Conversion Kit
Convert any E-XP2 to a E-30 with 15.3kW of heat. Include new pumps, bearing, and fitting to accomplish conversion. See manual 309574.

Heated Hoses
50 ft (15.2 m) and 25 ft (7.6 m) lengths, 1/4 in. (6 mm), 3/8 in. (10 mm), or 1/2 in. (13 mm) diameter, 2000 psi (14 MPa, 140 bar) or 3500 psi (24 MPa, 241 bar). See 309572.

Heated Whip Hoses
10 ft (3 m) whip hose, 1/4 in. (6 mm) or 3/8 in. (10 mm) diameter, 2000 psi (14 MPa, 140 bar) or 3500 psi (24 MPa, 241 bar). See 309572.

Fusion Spray Gun
Air purge gun, available in round or flat pattern. See 309550.

246085 Data Reporting Kit
Records actual temperature, temperature setpoint, actual pressure, cycles, and diagnostic code data from Reactor. Downloads data to PC with Microsoft® Windows 98 or later. See 309867.

248848 Data Reporting Kit
Records actual temperature, temperature setpoint, actual pressure, cycles, and diagnostic code data from Reactor. Downloads data to PC with Microsoft® Windows 98 or later. Does not include interface module. See 309867.

Graco Standard Warranty

Graco warrants all equipment referenced in this document which is manufactured by Graco and bearing its name to be free from defects in material and workmanship on the date of sale to the original purchaser for use. With the exception of any special, extended, or limited warranty published by Graco, Graco will, for a period of twelve months from the date of sale, repair or replace any part of the equipment determined by Graco to be defective. This warranty applies only when the equipment is installed, operated and maintained in accordance with Graco's written recommendations.

This warranty does not cover, and Graco shall not be liable for general wear and tear, or any malfunction, damage or wear caused by faulty installation, misapplication, abrasion, corrosion, inadequate or improper maintenance, negligence, accident, tampering, or substitution of non-Graco component parts. Nor shall Graco be liable for malfunction, damage or wear caused by the incompatibility of Graco equipment with structures, accessories, equipment or materials not supplied by Graco, or the improper design, manufacture, installation, operation or maintenance of structures, accessories, equipment or materials not supplied by Graco.

This warranty is conditioned upon the prepaid return of the equipment claimed to be defective to an authorized Graco distributor for verification of the claimed defect. If the claimed defect is verified, Graco will repair or replace free of charge any defective parts. The equipment will be returned to the original purchaser transportation prepaid. If inspection of the equipment does not disclose any defect in material or workmanship, repairs will be made at a reasonable charge, which charges may include the costs of parts, labor, and transportation.

THIS WARRANTY IS EXCLUSIVE, AND IS IN LIEU OF ANY OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTY OF MERCHANTABILITY OR WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE.

Graco's sole obligation and buyer's sole remedy for any breach of warranty shall be as set forth above. The buyer agrees that no other remedy (including, but not limited to, incidental or consequential damages for lost profits, lost sales, injury to person or property, or any other incidental or consequential loss) shall be available. Any action for breach of warranty must be brought within two (2) years of the date of sale.

GRACO MAKES NO WARRANTY, AND DISCLAIMS ALL IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, IN CONNECTION WITH ACCESSORIES, EQUIPMENT, MATERIALS OR COMPONENTS SOLD BUT NOT MANUFACTURED BY GRACO. These items sold, but not manufactured by Graco (such as electric motors, switches, hose, etc.), are subject to the warranty, if any, of their manufacturer. Graco will provide purchaser with reasonable assistance in making any claim for breach of these warranties.

In no event will Graco be liable for indirect, incidental, special or consequential damages resulting from Graco supplying equipment hereunder, or the furnishing, performance, or use of any products or other goods sold hereto, whether due to a breach of contract, breach of warranty, the negligence of Graco, or otherwise.

FOR GRACO CANADA CUSTOMERS

The Parties acknowledge that they have required that the present document, as well as all documents, notices and legal proceedings entered into, given or instituted pursuant hereto or relating directly or indirectly hereto, be drawn up in English. Les parties reconnaissent avoir convenu que la rédaction du présent document sera en Anglais, ainsi que tous documents, avis et procédures judiciaires exécutés, donnés ou intentés, à la suite de ou en rapport, directement ou indirectement, avec les procédures concernées.
