Operation

Electric, Heated, Plural Component Proportioner

For spraying polyurethane foam and polyurea coatings. For professional use only. Not approved for use in European explosive atmosphere locations.

Important Safety Instructions

Read all warnings and instructions in this manual. Save these instructions.

See page 4 for model information, including maximum working pressure and approvals.

* Full load amps with all devices operating at maximum capabilities. Fuse requirements at various flow rates and mix chamber sizes may be less.

† Total system watts, based on maximum hose length for each unit:

- E-20 and E-XP1 series, 210 ft (64 m) maximum heated hose length, including whip hose.
- E-30 and E-XP2 series, 310 ft (94.5 m) maximum heated hose length, including whip hose.

◆ Maximum flow rate given for 60 Hz operation. For 50 Hz operation, maximum flow rate is 5/6 of 60 Hz maximum flow.

## Warnings

The following warnings are for the setup, use, grounding, maintenance, and repair of this equipment. The exclamation point symbol alerts you to a general warning and the hazard symbol refers to procedure-specific risk. Refer back to these warnings. Additional, product-specific warnings may be found throughout the body of this manual where applicable.

<table>

WARNING

SKIN INJECTION HAZARD
High-pressure fluid from gun, hose leaks, or ruptured components will pierce skin. This may look like just a cut, but it is a serious injury that can result in amputation. Get immediate surgical treatment.
- Engage trigger lock when not spraying.
- Do not point gun at anyone or at any part of the body.
- Do not put your hand over the spray tip.
- Do not stop or deflect leaks with your hand, body, glove, or rag.
- Follow the Pressure Relief Procedure when you stop spraying and before cleaning, checking, or servicing equipment.
- Tighten all fluid connections before operating the equipment.
- Check hoses and couplings daily. Replace worn or damaged parts immediately.

FIRE AND EXPLOSION HAZARD
Flammable fumes, such as solvent and paint fumes, in work area can ignite or explode. To help prevent fire and explosion:
- Use equipment only in well ventilated area.
- Eliminate all ignition sources; such as pilot lights, cigarettes, portable electric lamps, and plastic drop cloths (potential static arc).
- Keep work area free of debris, including solvent, rags and gasoline.
- Do not plug or unplug power cords, or turn power or light switches on or off when flammable fumes are present.
- Ground all equipment in the work area. See Grounding instructions.
- Use only grounded hoses.
- Hold gun firmly to side of grounded pail when triggering into pail.
- If there is static sparking or you feel a shock, stop operation immediately. Do not use equipment until you identify and correct the problem.
- Keep a working fire extinguisher in the work area.

THERMAL EXPANSION HAZARD
Fluids subjected to heat in confined spaces, including hoses, can create a rapid rise in pressure due to the thermal expansion. Over-pressurization can result in equipment rupture and serious injury.
- Open a valve to relieve the fluid expansion during heating.
- Replace hoses proactively at regular intervals based on your operating conditions.

PRESSURIZED ALUMINUM PARTS HAZARD
Use of fluids that are incompatible with aluminum in pressurized equipment can cause serious chemical reaction and equipment rupture. Failure to follow this warning can result in death, serious injury, or property damage.
- Do not use 1,1,1-trichloroethane, methylene chloride, other halogenated hydrocarbon solvents or fluids containing such solvents.
- Many other fluids may contain chemicals that can react with aluminum. Contact your material supplier for compatibility.
## WARNING

### EQUIPMENT MISUSE HAZARD

Misuse can cause death or serious injury.
- This equipment is for professional use only.
- Do not leave the work area while equipment is energized or under pressure. Turn off all equipment and follow the **Pressure Relief Procedure** in this manual when equipment is not in use.
- Do not operate the unit when fatigued or under the influence of drugs or alcohol.
- Do not exceed the maximum working pressure or temperature rating of the lowest rated system component. See **Technical Data** in all equipment manuals.
- Use fluids and solvents that are compatible with equipment wetted parts. See **Technical Data** in all equipment manuals. Read fluid and solvent manufacturer’s warnings. For complete information about your material, request MSDS forms from distributor or retailer.
- Check equipment daily. Repair or replace worn or damaged parts immediately with genuine manufacturer’s replacement parts only.
- Do not alter or modify equipment.
- Use equipment only for its intended purpose. Call your distributor for information.
- Route hoses and cables away from traffic areas, sharp edges, moving parts, and hot surfaces.
- Do not kink or over bend hoses or use hoses to pull equipment.
- Keep children and animals away from work area.
- Comply with all applicable safety regulations.

### MOVING PARTS HAZARD

Moving parts can pinch or amputate fingers and other body parts.
- Keep clear of moving parts.
- Do not operate equipment with protective guards or covers removed.
- Pressurized equipment can start without warning. Before checking, moving, or servicing equipment, follow the **Pressure Relief Procedure** in this manual. Disconnect power or air supply.

### BURN HAZARD

Equipment surfaces and fluid that’s heated can become very hot during operation. To avoid severe burns, do not touch hot fluid or equipment. Wait until equipment/fluid has cooled completely.
Spraying or dispensing fluids that contain isocyanates creates potentially harmful mists, vapors, and atomized particulates.

- Read and understand the fluid manufacturer’s warnings and Safety Data Sheet (SDS) to know specific hazards and precautions related to isocyanates.
- Use of isocyanates involves potentially hazardous procedures. Do not spray with this equipment unless you are trained, qualified, and have read and understood the information in this manual and in the fluid manufacturer’s application instructions and SDS.
- Use of incorrectly maintained or mis-adjusted equipment may result in improperly cured material which could cause off gassing and offensive odors. Equipment must be carefully maintained and adjusted according to instructions in the manual.
- To prevent inhalation of isocyanate mists, vapors and atomized particulates, everyone in the work area must wear appropriate respiratory protection. Always wear a properly fitting respirator, which may include a supplied-air respirator. Ventilate the work area according to instructions in the fluid manufacturer’s SDS.
- Avoid all skin contact with isocyanates. Everyone in the work area must wear chemically impermeable gloves, protective clothing and foot coverings as recommended by the fluid manufacturer and local regulatory authority. Follow all fluid manufacturer recommendations, including those regarding handling of contaminated clothing. After spraying, wash hands and face before eating or drinking.
- Hazard from exposure to isocyanates continues after spraying. Anyone without appropriate personal protective equipment must stay out of the work area during application and after application for the time period specified by the fluid manufacturer. Generally this time period is at least 24 hours.
- Warn others who may enter work area of hazard from exposure to isocyanates. Follow the recommendations of the fluid manufacturer and local regulatory authority. Posting a placard such as the following outside the work area is recommended:
For all applications except spray foam

Spraying or dispensing fluids that contain isocyanates creates potentially harmful mists, vapors, and atomized particulates.

- Read and understand the fluid manufacturer's warnings and Safety Data Sheet (SDS) to know specific hazards and precautions related to isocyanates.
- Use of isocyanates involves potentially hazardous procedures. Do not spray with this equipment unless you are trained, qualified, and have read and understood the information in this manual and in the fluid manufacturer's application instructions and SDS.
- Use of incorrectly maintained or mis-adjusted equipment may result in improperly cured material. Equipment must be carefully maintained and adjusted according to instructions in the manual.
- To prevent inhalation of isocyanate mists, vapors, and atomized particulates, everyone in the work area must wear appropriate respiratory protection. Always wear a properly fitting respirator, which may include a supplied-air respirator. Ventilate the work area according to instructions in the fluid manufacturer's SDS.
- Avoid all skin contact with isocyanates. Everyone in the work area must wear chemically impermeable gloves, protective clothing and foot coverings as recommended by the fluid manufacturer and local regulatory authority. Follow all fluid manufacturer recommendations, including those regarding handling of contaminated clothing. After spraying, wash hands and face before eating or drinking.

Material Self-ignition

Some materials may become self-igniting if applied too thick. Read material manufacturer's warnings and Safety Data Sheet (SDS).

Keep Components A and B Separate

Cross-contamination can result in cured material in fluid lines which could cause serious injury or damage equipment. To prevent cross-contamination:
- **Never** interchange component A and component B wetted parts.
- Never use solvent on one side if it has been contaminated from the other side.
Moisture Sensitivity of Isocyanates

Exposure to moisture (such as humidity) will cause ISO to partially cure, forming small, hard, abrasive crystal that become suspended in the fluid. Eventually a film will form on the surface and the ISO will begin to gel, increasing in viscosity.

**NOTE:**
The amount of film formation and rate of crystallization varies depending on the blend of ISO, the humidity, and the temperature.

---

Foam Resins with 245 fa Blowing Agents

Some foam blowing agents will froth at temperatures above 90°F (33°C) when not under pressure, especially if agitated. To reduce frothing, minimize preheating in a circulation system.

---

Changing Materials

**NOTICE**
Changing the material types used in your equipment requires special attention to avoid equipment damage and downtime.

- When changing materials, flush the equipment multiple times to ensure it is thoroughly clean.
- Always clean the fluid inlet strainers after flushing.
- Check with your material manufacturer for chemical compatibility.
- When changing between epoxies and urethanes or polyureas, disassemble and clean all fluid components and change hoses. Epoxies often have amines on the B (hardener) side. Polyureas often have amines on the B (resin) side.

---

**NOTICE**
Partially cured ISO will reduce performance and the life of all wetted parts.

- Always use a sealed container with a desiccant dryer in the vent, or a nitrogen atmosphere. **Never** store ISO in an open container.
- Keep the ISO pump wet cup or reservoir (if installed) filled with appropriate lubricant. The lubricant creates a barrier between the ISO and the atmosphere.
- Use only moisture-proof hoses compatible with ISO.
- Never use reclaimed solvents, which may contain moisture. Always keep solvent containers closed when not in use.
- Always lubricate threaded parts with an appropriate lubricant when reassembling.

**NOTE:**
Partially cured ISO will reduce performance and the life of all wetted parts.

</table>

**Main Power Switch**

Located on right side of unit, page 15. Turns Reactor power ON and OFF. Does not turn heater zones or pumps on.

**Red Stop Button**

Located between temperature control panel and motor control panel, page 15. Press to shut off motor and heater zones only. Use main power switch to shut off all power to unit.
**Temperature Controls and Indicators**

**Actual Temperature Key/LED**
Press 📈 to display actual temperature.
Press and hold 📈 to display electrical current.

**Target Temperature Key/LED**
Press 📈 to display target temperature.
Press and hold 📈 to display heater control circuit board temperature.

**Temperature Scale Keys/LEDs**
Press °F or °C to change temperature scale.

**Heater Zone On/Off Keys/LEDs**
Press 🕹️ to turn heater zones on and off. Also clears heater zone diagnostic codes, see page 37.

LEDs flash when heater zones are on. The duration of each flash shows the extent that the heater is turned on.

**Temperature Arrow Keys**
Press ⬆️, then press ⬆️ or ⬇️ to adjust temperature settings in 1 degree increments.

**Temperature Displays**
Show actual temperature or target temperature of heater zones, depending on selected mode. Defaults to actual at startup. Range is 32-190°F (0-88°C) for A and B, 32-180°F (0-82°C) for hose.

**Circuit Breakers**
Located inside Reactor cabinet.

Motor Controls and Indicators

**NOTICE**
To prevent damage to the softkey buttons, do not press the buttons with sharp objects such as pens, plastic cards, or fingernails.

**Motor ON/OFF Key/LED**
Press to turn motor ON and OFF. Also clears some motor control diagnostic codes, see page 37.

**PARK Key/LED**
Press at end of day to cycle component A pump to home position, submerging displacement rod. Trigger gun until pump stops. Once parked, motor will automatically shut off.

**PSI/BAR Keys/LEDs**
Press or to change pressure scale.

**Pressure Key/LED**
Press to display fluid pressure.

If pressures are imbalanced, display shows higher of two pressures.

**Cycle Count Key/LED**
Press to display cycle count.

To clear counter, press and hold for 3 sec.
Spray Adjustments

Flow rate, atomization, and amount of overspray are affected by four variables.

- **Fluid pressure setting.** Too little pressure results in an uneven pattern, coarse droplet size, low flow, and poor mixing. Too much pressure results in excessive overspray, high flow rates, difficult control, and excessive wear.

- **Fluid temperature.** Similar effects to fluid pressure setting. The A and B temperatures can be offset to help balance the fluid pressure.

- **Mix chamber size.** Choice of mix chamber is based on desired flow rate and fluid viscosity.

- **Clean-off air adjustment.** Too little clean-off air results in droplets building up on the front of the nozzle, and no pattern containment to control overspray. Too much clean-off air results in air-assisted atomization and excessive overspray.

Pressure Arrow Keys

Press \( \uparrow \) or \( \downarrow \) to adjust fluid pressure when motor is ON. Setpoint displays for 10 sec.

When motor is OFF, pressing \( \downarrow \) will enter jog mode. To exit jog mode, press \( \downarrow \) until display shows dashes or current pressure.

Pressure/Cycle Display

Shows fluid pressure or cycle count, depending on mode selected.

Displays J 1 through J 10 when in jog mode, page 36.
1. Locate Reactor
   a. Locate Reactor on a level surface. See Dimensions page 41, for clearance and mounting hole dimensions.
   b. Do not expose Reactor to rain.
   c. Use the casters to move Reactor to a fixed location, or bolt to shipping pallet and move with forklift.
   d. To mount on a truck bed or trailer, remove casters and secure rear axle with 15B805 mobile mounting bracket (MB), available separately.

2. General equipment guidelines
   - Determine the correct size generator. Using the correct size generator and proper air compressor will enable the proportioner to run at a nearly constant RPM. Failure to do so will cause voltage fluctuations that can damage electrical equipment. Ensure the generator matches the voltage and phase of the proportioner.
     
     Use the following procedure to determine the correct size generator.
     a. List system components that use peak load requirements in watts.
     b. Add the wattage required by the system components.
     c. Perform the following equation:
        Total watts x 1.25 = kVA (kilovolt-amperes)
     d. Select a generator size that is equal to or greater than the determined kVA.
     
     - Use proportioner power cords that meet or exceed the requirements listed in Table 2. Failure to do so will cause voltage fluctuations that can damage electrical equipment.
• Use an air compressor with constant speed head unloading devices. Direct online air compressors that start and stop during a job will cause voltage fluctuations that can damage electrical equipment.

• Maintain and inspect the generator, air compressor, and other equipment per the manufacturer recommendations to avoid an unexpected shutdown. Unexpected equipment shutdown will cause voltage fluctuations that can damage electrical equipment.

• Use a wall power supply with enough current to meet system requirements. Failure to do so will cause voltage fluctuations that can damage electrical equipment.

3. Electrical requirements

   See Table 1.

</table>

a. **200-240 V ac, 1-phase**: Using 5/32 or 4 mm hex allen wrench, connect two power leads to L1 and L2. Connect green to ground (GND).

b. **200-240 V ac, 3-phase**: Using 5/32 or 4 mm hex allen wrench, connect three power leads to L1, L2, and L3. Connect green to ground (GND).

c. **350-415 V ac, 3-phase**: Using 5/32 or 4 mm hex allen wrench, connect three power leads to L1, L2, and L3. Connect neutral to N. Connect green to ground (GND).
5. **Connect feed pumps**
   
a. Install feed pumps (K) in component A and B supply drums. See Fig. 1 and Fig. 2, pages 13 and 14.

b. Seal component A drum and use desiccant dryer (M) in vent.

c. Install agitator (L) in component B drum, if necessary.

d. Ensure A and B inlet valves (FV) are closed.

![Image of feed pumps installation](image)

Supply hoses from feed pumps should be 3/4 in. (19 mm) ID.

6. **Connect pressure relief lines**

   ![Warning icon]

   Do not install shutoffs downstream of the PRESSURE RELIEF/SPRAY valve outlets (BA, BB). The valves function as overpressure relief valves when set to SPRAY. Lines must be open so valves can automatically relieve pressure when machine is operating.

   If circulating fluid back to the supply drums, use high pressure hose rated to withstand the maximum working pressure of this equipment.

   ![Diagram of pressure relief lines](image)

   a. Recommended: Connect high pressure hose (R) to relief fittings (BA, BB) of both PRESSURE RELIEF/SPRAY valves, Route hose back to component A and B drums. See Fig. 1, page 13.

   b. Alternately: Secure supplied bleed tubes (N) in grounded, sealed waste containers (H). See Fig. 2, page 14.

7. **Install Fluid Temperature Sensor (FTS)**

   The Fluid Temperature Sensor (FTS) is supplied. Install FTS between main hose and whip hose. See Heated Hose manual 309572 for instructions.

8. **Connect heated hose**

   ![Warning icon]

   See Heated Hose manual 309572 for detailed instructions on connecting heated hoses.

   ![Diagram of heated hose connections](image)

   The fluid temperature sensor (C) and whip hose (D) must be used with heated hose, see page 23. Hose length, including whip hose, must be 60 ft (18.3 m) minimum.

   a. Turn main power OFF.

   b. Assemble heated hose sections, FTS, and whip hose.
c. Grease with Fusion® grease and connect fluid hoses to proportioner fluid manifold (M): red for hardener (ISO, blue for resin (RES)).

The manifold hose adapters (N, P) allow use of 1/4 in. (6.4 mm) and 3/8 in. (9.5 mm) ID fluid hoses. To check adapter tightness, torque 1/4 in. and 3/8 in. ID hoses to:
- A side (HA) to 14 ft-lb (19 N·m).
- B side (HB) to 20 ft-lb (27 N·m).

To use 1/2 in. (13 mm) ID fluid hoses, remove the adapters (N, P) from the proportioner fluid manifold and install them in the FTS or 3/8 in. ID hose inlets. Torque 1/2 in. ID hoses to:
- A side (HA) to 43 ft-lb (58 N·m).
- B side (HB) to 55 ft-lb (74 N·m).

e. Connect hose power wires to electrical splice connectors (V) from proportioner. Wrap connections with electrical tape.

f. Connect FTS cable connectors (Y). Fully tighten connectors and slide connector covers over the joint.

g. Check that all equipment is properly grounded. See proportioner manual.

9. Close gun fluid manifold valves A and B

For proportioners with a termination box (TB), follow step 8d. For proportioners with electrical splice connectors (v), follow step 8e.

d. Connect hose power wires to the terminal block (C) on the termination box (TB). Remove box cover (D) and loosen lower strain relief (E). Route wires through strain relief and fully insert into terminal block (A and B hose wire positions are not important). Torque terminal block screws (C) to 35-50 in-lb (4.0-5.6 N·m). Fully tighten strain relief screws and replace cover.

10. Connect whip hose to gun fluid manifold

Do not connect manifold to gun.

11. Pressure check hose

See hose manual. Pressure check for leaks. If no leaks, wrap hose and electrical connections to protect from damage.
12. Ground system

- Reactor: is grounded through power cord. See page 22.
- Spray gun: connect whip hose ground wire to FTS, page 23. Do not disconnect wire or spray without whip hose.
- Fluid supply containers: follow your local code.
- Object being sprayed: follow your local code.
- Solvent pails used when flushing: follow your local code. Use only metal pails, which are conductive, placed on a grounded surface. Do not place pail on a nonconductive surface, such as paper or cardboard, which interrupts grounding continuity.
- To maintain grounding continuity when flushing or relieving pressure, hold a metal part of spray gun firmly to the side of a grounded metal pail, then trigger gun.

13. Supply wet cups with Throat Seal Liquid (TSL)

- Component A (ISO) Pump: Keep reservoir (R) filled with Graco Throat Seal Liquid (TSL), Part 206995. Wet-cup piston circulates TSL through wet-cup, to carry away isocyanate film on displacement rod.

- Component B (Resin) Pump: Check felt washers in packing nut/wet-cup (S) daily. Keep saturated with Graco Throat Seal Liquid (TSL), Part No. 206995, to prevent material from hardening on displacement rod. Replace felt washers when worn or contaminated with hardened material.

Pump rod and connecting rod move during operation. Moving parts can cause serious injury such as pinching or amputation. Keep hands and fingers away from wet-cup during operation. Turn main power OFF before filling wet cup.
# Startup

<table>
<thead>
<tr>
<th>NOTICE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Proper system setup, startup, and shutdown procedures are critical to electrical equipment reliability. The following procedures ensure steady voltage. Failure to follow these procedures will cause voltage fluctuations that can damage electrical equipment and void the warranty.</td>
</tr>
</tbody>
</table>

Do not operate Reactor without all covers and shrouds in place.

1. **Check generator fuel level.**  
   Running out of fuel will cause voltage fluctuations that can damage electrical equipment.

2. **Ensure the main breaker on the generator is in the off position.**

3. **Start the generator. Allow it to reach full operating temperature.**

4. **Close the bleed valve on the air compressor.**

5. **Switch on the air compressor starter and air dryer, if included.**

6. **Turn on power to the Reactor.**

7. **Load fluid with feed pumps**

   The Reactor is tested with oil at the factory. Flush out the oil with a compatible solvent before spraying. See page 40.

   ![Diagram](image)

   a. Check that all **Setup** steps are complete.
   b. Check that inlet screens are clean before daily startup, page 38.
   c. Check level and condition of ISO lube daily, page 38.
   d. Turn on component B agitator, if used.
   e. Turn both PRESSURE RELIEF/SPRAY valves (SA, SB) to SPRAY.
   f. Start feed pumps.
   g. Open fluid inlet valves (FV). Check for leaks.

   ![Diagram](image)

   TI10972a
h. Use feed pumps to load system. Hold gun fluid manifold over two grounded waste containers. Open fluid valves A and B until clean, air-free fluid comes from valves. Close valves.

8. Set temperatures

Temperature Controls and Indicators, see page 16

This equipment is used with heated fluid, which can cause equipment surfaces to become very hot. To avoid severe burns:

- Do not touch hot fluid or equipment.
- Allow equipment to cool completely before touching it.
- Wear gloves if fluid temperature exceeds 110°F (43°C).

a. Turn main power ON.

b. Press $F$ or $C$ to change temperature scale.

c. Press $\square$ to display target temperatures.

d. To set $A$ heat zone target temperature, press $\uparrow$ or $\downarrow$ until display shows
Startup

desired temperature. Repeat for \( B \) and
\( A \) zones.

For \( A \) zone only, if FTS is disconnected at startup, display will show hose current (0A). See step j, page 28.

e. Press \( \) to display actual temperatures.

f. Turn on heat zone by pressing \( \). Preheat hose (15-60 min). Indicator will flash very slowly when fluid reaches target temperature. Display shows actual fluid temperature in hose near FTS.

\[ \]

Do not turn on hose heat without fluid in hoses.

Thermal expansion can cause overpressurization, resulting in equipment rupture and serious injury, including fluid injection. Do not pressurize system when preheating hose.

g. Turn on \( A \) and \( B \) heat zones by pressing \( \) for each zone.

h. Hold \( \) to view electrical currents for each zone.

i. Hold \( \) to view heater control circuit board temperature.

j. Manual current control mode only:

When in manual current control mode, monitor hose temperature with thermometer. Install per instructions below. Thermometer reading must not exceed 160°F (71°C). Never leave machine unattended when in manual current control mode.

If FTS is disconnected or display shows diagnostic code E04, turn main power switch OFF then ON to clear diagnostic code and enter manual current control mode.

\[ \]

display will show current to hose. Current is not limited by target temperature.

Press \( \) or \( \) to adjust current setting.

To prevent overheating, install hose thermometer close to gun end, within operator view. Insert thermometer through foam cover of A component hose so stem is next to inner tube. Thermometer reading will be about 20°F less than actual fluid temperature.

If thermometer reading exceeds 160°F (71°C), reduce current with \( \) key.
9. Set pressure

Motor Controls and Indicators, see page 18

a. Press \[\textcircled{1}\] .

b. Press motor \[\textcircled{1}\] . Motor and pumps start. Display shows system pressure. Motor runs until setpoint is reached.

c. Press \[\textcircled{<}\] or \[\textcircled{>}\] until display shows desired fluid pressure. Display will show setpoint for 10 seconds, then change to actual pressure.

If display pressure is greater than setpoint pressure, trigger gun to reduce pressure.

If display shows J xx, unit is in jog mode. To exit jog mode, see page 36.

d. To display cycle count, press \[\textcircled{L3C}\] .

to clear counter, press \[\textcircled{L3C}\] and hold for 3 seconds.

e. Press \[\textcircled{PSI}\] or \[\textcircled{BAR}\] to change pressure scale.

10. Change pressure imbalance setting (optional)

The pressure imbalance function (status code 24) detects conditions that can cause off-ratio spray, such as loss of feed pressure/supply, pump seal failure, clogged fluid inlet filter, or a fluid leak.

Code 24 (pressure imbalance) is set to an alarm as the default. To change to a warning, see Reactor Repair-Parts manual 312066.

The pressure imbalance default is factory-set at 500 psi (3.5 MPa, 35 bar). For tighter ratio error detection, select a lower value. For looser detection or to avoid nuisance alarms, select a higher value.

a. Turn main power switch OFF .

b. Press and hold \[\textcircled{PSI}\] or \[\textcircled{BAR}\] , then turn main power switch ON . Display will read dP500 for psi or dP_35 for bar.

c. Press \[\textcircled{<}\] or \[\textcircled{>}\] to select desired pressure differential (100-999 in increments of 100 psi, or 7-70 in increments of 7 bar). See Table 3.

d. Turn main power switch OFF to save changes.

Table 3: Available Pressure Imbalance Settings

<table>

<td>69</td>
</tr>
</tbody>
</table>

* Factor default setting.
1. Engage gun piston safety lock.

2. Close gun fluid manifold valves A and B.

3. Attach gun fluid manifold. Connect gun air line. Open air line valve.

4. Set PRESSURE RELIEF/SPRAY valves (SA, SB) to SPRAY.

5. Check that heat zones are on and temperatures are on target, page 27.

6. Press motor to start motor and pumps.

7. Check fluid pressure display and adjust as necessary, page 30.
8. Check fluid pressure gauges (GA, GB) to ensure proper pressure balance. If imbalanced, reduce pressure of higher component by **slightly** turning PRESSURE RELIEF/SPRAY valve for that component toward PRESSURE RELIEF/CIRCULATION, until gauges show balanced pressures.

9. Open gun fluid manifold valves A and B.

On impingement guns, **never** open fluid manifold valves or trigger gun if pressures are imbalanced.

10. Disengage gun piston safety lock.

11. Test spray onto cardboard. Adjust pressure and temperature to get desired results.

12. Equipment is ready to spray.
### Shutdown

<table>
<thead>
<tr>
<th>NOTICE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Proper system setup, startup, and shutdown procedures are critical to electrical equipment reliability. The following procedures ensure steady voltage. Failure to follow these procedures will cause voltage fluctuations that can damage electrical equipment and void the warranty.</td>
</tr>
</tbody>
</table>

1. Shut off A, B, and heat zones.
2. Park pumps.
   a. Press 🔄.
   b. Trigger gun until pump A stops in the retracted position and the pressure of both pumps bleeds down.
3. Turn main power OFF 🌍.
4. Relieve pressure, page 33.
5. Turn off the air compressor and air dryer, if included.
6. Open air compressor bleed valve to relieve pressure and remove water from tank.
7. Turn off the main breaker on the generator.
8. Allow generator dwell time, per manufacturer recommendations, prior to shutdown.
9. Close both fluid supply valves (FV).
10. Shut down feed pumps as required.
Pressure Relief Procedure

1. Relieve pressure in gun and perform gun shutdown procedure. See gun manual.

2. Close gun fluid manifold valves A and B.

3. Shut off feed pumps and agitator, if used.

4. Turn PRESSURE RELIEF/SPRAY valves (SA, SB) to PRESSURE RELIEF/CIRCULATION. Route fluid to waste containers or supply tanks. Ensure gauges drop to 0.

5. Engage gun piston safety lock.

6. Disconnect gun air line and remove gun fluid manifold.
Fluid Circulation

Circulation Through Reactor

To circulate through gun manifold and preheat hose, see page 35.

2. See Typical Installation, with circulation, page 13. Route circulation lines back to respective component A or B supply drum. Use hoses rated at the maximum working pressure of this equipment. See Technical Data, page .

3. Set PRESSURE RELIEF/SPRAY valves (SA, SB) to PRESSURE RELIEF/CIRCULATION .

4. Turn main power ON .

5. Set temperature targets, see page 27. Turn on A and B heat zones by pressing .

   **Do not** turn on heat zone unless hoses are already loaded with fluid.

6. Press to display actual temperatures.

7. Circulate fluid in jog mode until A and B temperatures reach targets.

8. Turn on heat zone by pressing .

9. Set PRESSURE RELIEF/SPRAY valves (SA, SB) to SPRAY .

   **Do not** circulate fluid containing a blowing agent without consulting with your material supplier regarding fluid temperature limits.

   **Do not** install shutoffs downstream of the PRESSURE RELIEF/SPRAY valve outlets (BA, BB). The valves function as overpressure relief valves when set to SPRAY . Lines must be open so valves can automatically relieve pressure when machine is operating.
Circulation Through Gun Manifold

1. Install gun fluid manifold (P) on Part 246362 accessory circulation kit (CK). Connect high pressure circulation lines (R) to circulation manifold.

2. Route circulation lines back to respective component A or B supply drum. Use hoses rated at the maximum working pressure of this equipment. See Typical Installation, without circulation, page 14.

4. Turn main power ON.

5. Set temperature targets, see page 27. Turn on A, B, and Q heat zones by pressing.

6. Press to display actual temperatures.

7. Circulate fluid in jog mode until A and B temperatures reach targets.

Do not circulate fluid containing a blowing agent without consulting with your material supplier regarding fluid temperature limits.

Circulating fluid through the gun manifold allows rapid preheating of hose.
Jog Mode

Jog mode has two purposes:

- It can speed fluid heating during circulation.
- It can ease pump repair/replacement. See repair manual.

1. Turn main power on.
2. Ensure motor is OFF (LED is off; display may show dashes or pressure).
3. Press \( \text{\textbullet} \) to select J1 (jog speed 1).
4. Press motor \( \text{\textbullet} \) to start motor.
5. Press \( \text{\textbullet} \) or \( \text{\textbullet} \) to change jog speed (J1 through J10).

Jog speeds correlate to 3-30\% of motor power, but will not operate over 700 psi (4.9 MPa, 49 bar) for either A or B.

6. To exit jog mode, press \( \text{\textbullet} \) until display shows dashes or current pressure.
Diagnostic Codes

Temperature Control Diagnostic Codes

Temperature control diagnostic codes appear on temperature display.

These alarms turn off heat. E99 clears automatically when communication is regained. Codes E03 through E06 can be cleared by pressing \( \text{I} \). For other codes, turn main power OFF then ON to clear.

See repair manual for corrective action.

<table>

<td>Loss of display communication</td>
<td>All</td>
</tr>
</tbody>
</table>

For hose zone only, if FTS is disconnected at startup, display will show hose current 0A.

Motor Control Diagnostic Codes

Motor control diagnostic codes E21 through E29 appear on pressure display.

There are two types of motor control codes: alarms and warnings. Alarms take priority over warnings. See repair manual for corrective action.

Alarms

Alarms turn off motor and heat zones. Turn main power OFF then ON to clear.

Alarms can also be cleared, except for code 23, by pressing \( \text{I} \).

Warnings

Reactor will continue to run. Press \( \text{I} \) to clear. A warning will not recur for a predetermined amount of time (varies for different warnings), or until main power is turned OFF then ON.
Maintenance

- Check wet cup TSL level daily.
- Do not overtighten packing nut/wet cup. Throat u-cup is not adjustable.
- Inspect fluid inlet strainer screens daily, see below.
- Grease circulation valves weekly with Fusion grease (117773).
- Inspect ISO lubricant level and condition daily, see page 39. Refill or replace as needed.
- Keep component A from exposure to moisture in atmosphere, to prevent crystallization.
- Clean gun mix chamber ports regularly. See gun manual.
- Clean gun check valve screens regularly. See gun manual.
- Use compressed air to prevent dust buildup on control boards, fan, motor (under shield), and hydraulic oil coolers.
- Keep vent holes on bottom of electrical cabinet open.

Fluid Inlet Strainer Screen

The inlet strainers filter out particles that can plug the pump inlet check valves. Inspect the screens daily as part of the startup routine, and clean as required.

Use clean chemicals and follow proper storage, transfer, and operating procedures, to minimize contamination of the A-side screen.

Clean the A-side screen only during daily startup. This minimizes moisture contamination by immediately flushing out any isocyanate residue at the start of dispensing operations.

1. Close the fluid inlet valve at the pump inlet and shut off the appropriate feed pump. This prevents material from being pumped while cleaning the screen.
2. Place a container under the strainer manifold (59d) to catch fluid. Remove the strainer plug (59j).
3. Remove the screen (59g) from the strainer manifold. Thoroughly flush the screen with compatible solvent and shake it dry. Inspect the screen. If more than 25% of the mesh is blocked, replace the screen. Inspect the gasket (59h) and replace as required.
4. Ensure the pipe plug (59k) is screwed into the strainer plug (59j). Install the strainer plug with the screen (59g) and gasket (59h) in place and tighten. Do not overtighten. Let the gasket make the seal.
5. Open the fluid inlet valve, ensure that there are no leaks, and wipe the equipment clean. Proceed with operation.

Fig. 9. Fluid Inlet Strainer
**Pump Lubrication System**

Check the condition of the ISO pump lubricant daily. Change the lubricant if it becomes a gel, its color darkens, or it becomes diluted with isocyanate.

Gel formation is due to moisture absorption by the pump lubricant. The interval between changes depends on the environment in which the equipment is operating. The pump lubrication system minimizes exposure to moisture, but some contamination is still possible.

Lubricant discoloration is due to continual seepage of small amounts of isocyanate past the pump packings during operation. If the packings are operating properly, lubricant replacement due to discoloration should not be necessary more often than every 3 or 4 weeks.

To change pump lubricant:

1. Relieve pressure, page 33.

2. Lift the lubricant reservoir (LR) out of the bracket (RB) and remove the container from the cap. Holding the cap over a suitable container, remove the check valve and allow the lubricant to drain. Reattach the check valve to the inlet hose. See Fig. 10.

3. Drain the reservoir and flush it with clean lubricant.

4. When the reservoir is flushed clean, fill with fresh lubricant.

5. Thread the reservoir onto the cap assembly and place it in the bracket.

6. The lubrication system is ready for operation. No priming is required.

---

**Fig. 10. Pump Lubrication System**
Flush equipment only in a well-ventilated area. Do not spray flammable fluids. Do not turn on heaters while flushing with flammable solvents.

- Flush out old fluid with new fluid, or flush out old fluid with a compatible solvent before introducing new fluid.
- Use the lowest possible pressure when flushing.
- All fluid components are compatible with common solvents. Use only moisture-free solvents.
- To flush feed hoses, pumps, and heaters separately from heated hoses, set PRESSURE RELIEF/SPRAY valves (SA, SB) to PRESSURE RELIEF/CIRCULATION. Flush through bleed lines (N).
- To flush entire system, circulate through gun fluid manifold (with manifold removed from gun).
- To prevent moisture from reacting with isocyanate, always leave the system dry or filled with a moisture-free plasticizer or oil. Do not use water. See page 12.

Accessories

Feed Pump Kits
Pumps, hoses, and mounting hardware to supply fluids to Reactor. Includes 246483 Air Supply Kit. See 309815.

246483 Air Supply Kit
Hoses and fittings to supply air to feed pumps, agitator, and gun air hose. Included in feed pump kits. See 309827.

246978 Circulation Kit
Return hoses and fittings to make circulation system. Includes two 246477 Return Tube Kits. See 309852.

246477 Return Tube Kit
Desiccant dryer, return tube, and fittings for one drum. Two included in 246978 Circulation Kit. See 309852.

248669 Conversion Kit
Convert any E-XP2 to a E-30 with 15.3kW of heat. Include new pumps, bearing, and fitting to accomplish conversion. See manual 309574.

Heated Hoses
50 ft (15.2 m) and 25 ft (7.6 m) lengths, 1/4 in. (6 mm), 3/8 in. (10 mm), or 1/2 in. (13 mm) diameter, 2000 psi (14 MPa, 140 bar) or 3500 psi (24 MPa, 241 bar). See 309572.

Heated Whip Hoses
10 ft (3 m) whip hose, 1/4 in. (6 mm) or 3/8 in. (10 mm) diameter, 2000 psi (14 MPa, 140 bar) or 3500 psi (24 MPa, 241 bar). See 309572.

Fusion Spray Gun
Air purge gun, available in round or flat pattern. See 309550.

246085 Data Reporting Kit
Records actual temperature, temperature setpoint, actual pressure, cycles, and diagnostic code data from Reactor. Downloads data to PC with Microsoft® Windows 98 or later. See 309867.

248848 Data Reporting Kit
Records actual temperature, temperature setpoint, actual pressure, cycles, and diagnostic code data from Reactor. Downloads data to PC with Microsoft® Windows 98 or later. Does not include interface module. See 309867.

Graco Standard Warranty

Graco warrants all equipment referenced in this document which is manufactured by Graco and bearing its name to be free from defects in material and workmanship on the date of sale to the original purchaser for use. With the exception of any special, extended, or limited warranty published by Graco, Graco will, for a period of twelve months from the date of sale, repair or replace any part of the equipment determined by Graco to be defective. This warranty applies only when the equipment is installed, operated and maintained in accordance with Graco’s written recommendations.

This warranty does not cover, and Graco shall not be liable for general wear and tear, or any malfunction, damage or wear caused by faulty installation, misapplication, abrasion, corrosion, inadequate or improper maintenance, negligence, accident, tampering, or substitution of non-Graco component parts. Nor shall Graco be liable for malfunction, damage or wear caused by the incompatibility of Graco equipment with structures, accessories, equipment or materials not supplied by Graco, or the improper design, manufacture, installation, operation or maintenance of structures, accessories, equipment or materials not supplied by Graco.

This warranty is conditioned upon the prepaid return of the equipment claimed to be defective to an authorized Graco distributor for verification of the claimed defect. If the claimed defect is verified, Graco will repair or replace free of charge any defective parts. The equipment will be returned to the original purchaser transportation prepaid. If inspection of the equipment does not disclose any defect in material or workmanship, repairs will be made at a reasonable charge, which charges may include the costs of parts, labor, and transportation.

THIS WARRANTY IS EXCLUSIVE, AND IS IN LIEU OF ANY OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTY OF MERCHANTABILITY OR WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE.

Graco’s sole obligation and buyer’s sole remedy for any breach of warranty shall be as set forth above. The buyer agrees that no other remedy (including, but not limited to, incidental or consequential damages for lost profits, lost sales, injury to person or property, or any other incidental or consequential loss) shall be available. Any action for breach of warranty must be brought within two (2) years of the date of sale.

GRACO MAKES NO WARRANTY, AND DISCLAIMS ALL IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, IN CONNECTION WITH ACCESSORIES, EQUIPMENT, MATERIALS OR COMPONENTS SOLD BUT NOT MANUFACTURED BY GRACO. These items sold, but not manufactured by Graco (such as electric motors, switches, hose, etc.), are subject to the warranty, if any, of their manufacturer. Graco will provide purchaser with reasonable assistance in making any claim for breach of these warranties.

In no event will Graco be liable for indirect, incidental, special or consequential damages resulting from Graco supplying equipment hereunder, or the furnishing, performance, or use of any products or other goods sold hereto, whether due to a breach of contract, breach of warranty, the negligence of Graco, or otherwise.

FOR GRACO CANADA CUSTOMERS
The Parties acknowledge that they have required that the present document, as well as all documents, notices and legal proceedings entered into, given or instituted pursuant hereto, be drawn up in English. Les parties reconnaissent avoir convenu que la rédaction du présent document sera en Anglais, ainsi que tous documents, avis et procédures judiciaires exécutés, donnés ou intentés, à la suite de ou en rapport, directement ou indirectement, avec les procédures concernées.

Graco Information
