Reactor® 2 Hydraulic
Proportioning Systems

Hydraulic, Heated, Plural Component Proportioner for spraying polyurethane foam and polyurea coatings. Not for outdoor use. For professional use only. Not approved for use in explosive atmospheres or hazardous locations.

Important Safety Instructions
Read all warnings and instructions in this manual. Save these instructions.

For model information, see page 9.

# Warnings

The following warnings are for the setup, use, grounding, maintenance, and repair of this equipment. The exclamation point symbol alerts you to a general warning and the hazard symbols refer to procedure-specific risks. When these symbols appear in the body of this manual or on warning labels, refer back to these Warnings. Product-specific hazard symbols and warnings not covered in this section may appear throughout the body of this manual where applicable.

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>ELECTRIC SHOCK HAZARD</strong></td>
</tr>
<tr>
<td>This equipment must be grounded. Improper grounding, setup, or usage of the system can cause electric shock.</td>
</tr>
<tr>
<td>• Turn off and disconnect power at main switch before disconnecting any cables and before servicing or installing equipment.</td>
</tr>
<tr>
<td>• Connect only to grounded power source.</td>
</tr>
<tr>
<td>• All electrical wiring must be done by a qualified electrician and comply with all local codes and regulations.</td>
</tr>
<tr>
<td>• Do not expose to rain. Store indoors.</td>
</tr>
</tbody>
</table>

| **TOXIC FLUID OR FUMES** |
| Toxic fluids or fumes can cause serious injury or death if splashed in the eyes or on skin, inhaled or swallowed. |
| • Read Safety Data Sheet (SDS) for handling instructions and to know the specific hazards of the fluids you are using, including the effects of long-term exposure. |
| • When spraying, servicing equipment, or when in the work area, always keep work area well ventilated and always wear appropriate personal protective equipment. See **Personal Protective Equipment** warnings in this manual. |
| • Store hazardous fluid in approved containers, and dispose of it according to applicable guidelines. |

| **PERSONAL PROTECTIVE EQUIPMENT** |
| Always wear appropriate personal protective equipment and cover all skin when spraying, servicing equipment, or when in the work area. Protective equipment helps prevent serious injury, including long-term exposure; inhalation of toxic fumes, mists or vapors; allergic reaction; burns; eye injury and hearing loss. This protective equipment includes but is not limited to: |
| • A properly fitting respirator, which may include a supplied-air respirator, chemically impermeable gloves, protective clothing and foot coverings as recommended by the fluid manufacturer and local regulatory authority. |
| • Protective eyewear and hearing protection. |
**WARNING**

**SKIN INJECTION HAZARD**

High-pressure fluid from dispensing device, hose leaks, or ruptured components will pierce skin. This may look like just a cut, but it is a serious injury that can result in amputation. **Get immediate surgical treatment.**

- Engage trigger lock when not spraying.
- Do not point dispensing device at anyone or at any part of the body.
- Do not put your hand over the fluid outlet.
- Do not stop or deflect leaks with your hand, body, glove, or rag.
- Follow the **Pressure Relief Procedure** when you stop dispensing and before cleaning, checking, or servicing equipment.
- Tighten all fluid connections before operating the equipment.
- Check hoses and couplings daily. Replace worn or damaged parts immediately.

**FIRE AND EXPLOSION HAZARD**

Flammable fumes, such as solvent and paint fumes, in **work area** can ignite or explode. Paint or solvent flowing through the equipment can cause static sparking. To help prevent fire and explosion:

- Use equipment only in well ventilated area.
- Eliminate all ignition sources; such as pilot lights, cigarettes, portable electric lamps, and plastic drop cloths (potential static sparking).
- Ground all equipment in the work area. See **Grounding** instructions.
- Never spray or flush solvent at high pressure.
- Keep work area free of debris, including solvent, rags and gasoline.
- Do not plug or unplug power cords, or turn power or light switches on or off when flammable fumes are present.
- Use only grounded hoses.
- Hold gun firmly to side of grounded pail when triggering into pail. Do not use pail liners unless they are anti-static or conductive.
- **Stop operation immediately** if static sparking occurs or you feel a shock. Do not use equipment until you identify and correct the problem.
- Keep a working fire extinguisher in the work area.
### THERMAL EXPANSION HAZARD

Fluids subjected to heat in confined spaces, including hoses, can create a rapid rise in pressure due to the thermal expansion. Over-pressurization can result in equipment rupture and serious injury.

- Open a valve to relieve the fluid expansion during heating.
- Replace hoses proactively at regular intervals based on your operating conditions.

### PRESSURIZED ALUMINUM PARTS HAZARD

Use of fluids that are incompatible with aluminum in pressurized equipment can cause serious chemical reaction and equipment rupture. Failure to follow this warning can result in death, serious injury, or property damage.

- Do not use 1,1,1-trichloroethane, methylene chloride, other halogenated hydrocarbon solvents or fluids containing such solvents.
- Many other fluids may contain chemicals that can react with aluminum. Contact your material supplier for compatibility.

### PLASTIC PARTS CLEANING SOLVENT HAZARD

Many solvents can degrade plastic parts and cause them to fail, which could cause serious injury or property damage.

- Use only compatible water-based solvents to clean plastic structural or pressure-containing parts.
- See **Technical Data** in this and all other equipment instruction manuals. Read fluid and solvent manufacturer’s MSDSs and recommendations.
### WARNING

**EQUIPMENT MISUSE HAZARD**

Misuse can cause death or serious injury.

- Do not operate the unit when fatigued or under the influence of drugs or alcohol.
- Do not exceed the maximum working pressure or temperature rating of the lowest rated system component. See **Technical Data** in all equipment manuals.
- Use fluids and solvents that are compatible with equipment wetted parts. See Technical Data in all equipment manuals. Read fluid and solvent manufacturer’s warnings. For complete information about your material, request MSDS from distributor or retailer.
- Do not leave the work area while equipment is energized or under pressure.
- Turn off all equipment and follow the **Pressure Relief Procedure** when equipment is not in use.
- Check equipment daily. Repair or replace worn or damaged parts immediately with genuine manufacturer’s replacement parts only.
- Do not alter or modify equipment. Alterations or modifications may void agency approvals and create safety hazards.
- Make sure all equipment is rated and approved for the environment in which you are using it.
- Use equipment only for its intended purpose. Call your distributor for information.
- Route hoses and cables away from traffic areas, sharp edges, moving parts, and hot surfaces.
- Do not kink or over bend hoses or use hoses to pull equipment.
- Keep children and animals away from work area.
- Comply with all applicable safety regulations.

### MOVING PARTS HAZARD

Moving parts can pinch, cut or amputate fingers and other body parts.

- Keep clear of moving parts.
- Do not operate equipment with protective guards or covers removed.
- Pressurized equipment can start without warning. Before checking, moving, or servicing equipment, follow the **Pressure Relief Procedure** and disconnect all power sources.

### BURN HAZARD

Equipment surfaces and fluid that is heated can become very hot during operation. To avoid severe burns:

- Do not touch hot fluid or equipment.
Important Isocyanate Information

Isocyanates (ISO) are catalysts used in two component materials.

**Isocyanate Conditions**

Spraying or dispensing fluids that contain isocyanates creates potentially harmful mists, vapors, and atomized particulates.

- Read and understand the fluid manufacturer’s warnings and Safety Data Sheet (SDS) to know specific hazards and precautions related to isocyanates.
- Use of isocyanates involves potentially hazardous procedures. Do not spray with this equipment unless you are trained, qualified, and have read and understood the information in this manual and in the fluid manufacturer’s application instructions and SDS.
- Use of incorrectly maintained or mis-adjusted equipment may result in improperly cured material, which could cause off gassing and offensive odors. Equipment must be carefully maintained and adjusted according to instructions in the manual.
- To prevent inhalation of isocyanate mists, vapors and atomized particulates, everyone in the work area must wear appropriate respiratory protection. Always wear a properly fitting respirator, which may include a supplied-air respirator. Ventilate the work area according to instructions in the fluid manufacturer’s SDS.
- Avoid all skin contact with isocyanates. Everyone in the work area must wear chemically impermeable gloves, protective clothing and foot coverings as recommended by the fluid manufacturer and local regulatory authority. Follow all fluid manufacturer recommendations, including those regarding handling of contaminated clothing. After spraying, wash hands and face before eating or drinking.
- Hazard from exposure to isocyanates continues after spraying. Anyone without appropriate personal protective equipment must stay out of the work area during application and after application for the time period specified by the fluid manufacturer. Generally this time period is at least 24 hours.
- Warn others who may enter work area of hazard from exposure to isocyanates. Follow the recommendations of the fluid manufacturer and local regulatory authority. Posting a placard such as the following outside the work area is recommended:

![WARNING Placard](image-url)
Important Isocyanate Information

Material Self-Ignition

Some materials may become self-igniting if applied too thick. Read material manufacturer’s warnings and SDS.

Keep Components A and B Separate

Cross-contamination can result in cured material in fluid lines which could cause serious injury or damage to equipment. To prevent cross-contamination:

- **Never** interchange component A and component B wetted parts.
- **Never** use solvent on one side if it has been contaminated from the other side.

Changing Materials

Changing the material types used in your equipment requires special attention to avoid equipment damage and downtime.

- When changing materials, flush the equipment multiple times to ensure it is thoroughly clean.
- Always clean the fluid inlet strainers after flushing.
- Check with your material manufacturer for chemical compatibility.
- When changing between epoxies and urethanes or polyureas, disassemble and clean all fluid components and change hoses. Epoxies often have amines on the B (hardener) side. Polyureas often have amines on the B (resin) side.

Moisture Sensitivity of Isocyanates

Exposure to moisture (such as humidity) will cause ISO to partially cure, forming small, hard, abrasive crystals that become suspended in the fluid. Eventually a film will form on the surface and the ISO will begin to gel, increasing in viscosity.

**NOTICE**

Partially cured ISO will reduce performance and the life of all wetted parts.

- Always use a sealed container with a desiccant dryer in the vent, or a nitrogen atmosphere. **Never** store ISO in an open container.
- Keep the ISO pump wet cup or reservoir (if installed) filled with appropriate lubricant. The lubricant creates a barrier between the ISO and the atmosphere.
- Use only moisture-proof hoses compatible with ISO.
- **Never** use reclaimed solvents, which may contain moisture. Always keep solvent containers closed when not in use.
- Always lubricate threaded parts with an appropriate lubricant when reassembling.

**NOTE:** The amount of film formation and rate of crystallization varies depending on the blend of ISO, the humidity, and the temperature.

Foam Resins with 245 fa Blowing Agents

Some foam blowing agents will froth at temperatures above 90°F (33°C) when not under pressure, especially if agitated. To reduce frothing, minimize preheating in a circulation system.

ADM Display Details

Power Up Screen

The following screen appears when the ADM is powered up. It remains on while the ADM runs through initialization and establishes communication with other modules in the system.

Menu Bar

The menu bar appears at the top of each screen. (The following image is only an example.)

Date and Time

The date and time are always displayed in one of the following formats. The time is always displayed as a 24-hour clock.
- DD/MM/YY HH:MM
- YY/MM/DD HH:MM
- MM/DD/YY HH:MM

Arrows

The left and right arrows indicate screen navigation.

Screen Menu

The screen menu indicates the currently active screen, which is highlighted. It also indicates the associated screens that are available by scrolling left and right.

System Mode

The current system mode is displayed at the lower left of the menu bar.

System Errors

The current system error is displayed in the middle of the menu bar. There are four possibilities:

<table>
<thead>
<tr>
<th>Icon</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>No information or no error occurred</td>
</tr>
<tr>
<td>🔴</td>
<td>Advisory</td>
</tr>
<tr>
<td>🔴</td>
<td>Deviation</td>
</tr>
<tr>
<td>🔴</td>
<td>Alarm</td>
</tr>
</tbody>
</table>

See Troubleshoot Errors, page 61 for more information.

Status

The current system status is displayed at the lower right of the menu bar.

Soft Keys

Icons next to the soft keys indicate which mode or action is associated with each soft key. Soft keys that do not have an icon next to them are not active in the current screen.

---

**NOTICE**

To prevent damage to the soft key buttons, do not press buttons with sharp objects such as pens, plastic cards, or fingernails.

Navigating the Screens

There are two sets of screens:
- **Run Screens** – control spraying operations and display system status and data.
- **Setup Screens** – control system parameters and advanced features.

Press **Run** on any Run screen to enter the Setup screens. If the system has a password lock, the Password screen displays. If the system is not locked (password is set to 0000), System Screen 1 displays.

Press **Setup** on any Setup screen to return to the Home screen.

Press the Enter soft key to activate the editing function on any screen.

Press the Exit soft key to exit any screen.

Use the other softkeys to select the function adjacent to them.

8. Heater A (ISO) Temperature
9. Heater B (RES) Temperature
10. Hose Temperature
Installation

Mounting the System

To prevent serious injury due to system tipping over, make sure the Reactor is secured to the floor.

**NOTE:** Wall mounting brackets are not included with the system. Evaluate the installation to determine if additional support is required beyond the floor mounting screws.

1. See Dimensions, page 69 for mounting hole specifications.
2. Use a minimum of 4 of the 6 mounting holes, evenly spaced in the base of the system frame, to secure base to the floor.

**NOTE:** Bolts are not included.

Setup

Grounding

The equipment must be grounded to reduce the risk of static sparking and electric shock. Electric or static sparking can cause fumes to ignite or explode. Improper grounding can cause electric shock. Grounding provides an escape wire for the electric current.

- **Reactor:** System is grounded through the power cord.
- **Spray gun:** connect whip hose ground wire to FTS. See Install Fluid Temperature Sensor, page 32. Do not disconnect ground wire or spray without whip hose.
- **Fluid supply containers:** follow your local code.
- **Object being sprayed:** follow your local code.
- **Solvent pails used when flushing:** follow your local code. Use only metal pails, which are conductive, placed on a grounded surface. Do not place pail on a nonconductive surface, such as paper or cardboard, which interrupts grounding continuity.
- **To maintain grounding continuity when flushing or relieving pressure,** hold a metal part of spray gun firmly to the side of a grounded metal pail, then trigger gun.
General Equipment Guidelines

**NOTICE**

Failure to properly size the equipment may result in damage. To avoid damage to the equipment, follow the guidelines listed below.

- Determine the correct size generator. Using the correct size generator and proper air compressor will enable the proportioner to run at a nearly constant RPM. Failure to do so will cause voltage fluctuations that can damage electrical equipment. Ensure that the generator matches the voltage and phase of the proportioner.

Use the following procedure to determine the correct size generator.

1. List peak wattage requirements of all system components.
2. Add the wattage required by the system components.
3. Perform the following equation:
   \[ \text{Total watts} \times 1.25 = \text{kVA (kilovolt-amperes)} \]
4. Select a generator size that is equal to or greater than the determined kVA.

- Use proportioner power cords that meet or exceed the requirements listed in Table 5. Failure to do so will cause voltage fluctuations that can damage electrical equipment, and may cause the power cable to overheat.

- Use an air compressor with continuous run head unloading devices. Direct online air compressors that start and stop during a job will cause voltage fluctuations that can damage electrical equipment.

- Maintain and inspect the generator, air compressor, and other equipment per the manufacturer recommendations to avoid an unexpected shutdown. Unexpected equipment shutdown will cause voltage fluctuations that can damage electrical equipment.

- Use a wall power supply with enough current to meet system requirements. Failure to do so will cause voltage fluctuations that can damage electrical equipment.
Connect Power

**NOTE:** All electrical wiring must be done by a qualified electrician and comply with all local codes and regulations.

1. Turn main power switch (MP) OFF.
2. Open electrical enclosure door.
   **NOTE:** Terminal jumpers are located inside the electrical enclosure door if equipped.
3. Install supplied terminal jumpers in the positions shown in image for the power source used (H-30 and H-XP2 models only).
4. Route power cable through strain relief (EC) in electrical enclosure.
5. Connect incoming power wires as shown in image. Gently pull on all connections to verify they are properly secured.
6. Verify all items are connected properly as shown in image then close electrical enclosure door.

Lubrication System Setup

Component A (ISO) Pump: Fill ISO lube reservoir (LR) with Graco Throat Seal Liquid (TSL), part 206995 (supplied).

1. Lift the lubricant reservoir (LR) out of the bracket (RB) and remove the container from the cap.

2. Fill with fresh lubricant. Thread the reservoir onto the cap assembly and place it in the bracket (RB).

3. Push the larger diameter supply tube (ST) approximately 1/3 of the way into the reservoir.

4. Push the smaller diameter return tube (RT) into the reservoir until it reaches the bottom.

   NOTE: The return (RT) must reach the bottom of the reservoir to ensure that isocyanate crystals will settle to the bottom and not be siphoned into the supply tube (ST) and returned to the pump.

5. The lubrication is ready for operation. No priming is required.

Install Fluid Temperature Sensor

The Fluid Temperature Sensor (FTS) is supplied. Install FTS between main hose and whip hose (see Related Manuals, page 15).

Install Heated Hose to Proportioner

1. Remove cover (CV).

2. Route heated hose wires (HW) through strain relief (SR) and install wires into the open screw terminals on the terminal block (TB). Torque to 35 in-lb (3.95 N•m).

3. Reinstall cover (CV).
Advanced Display Module (ADM) Operation

When main power is turned on by turning the main power switch (MP) to the ON position, the power up screen will be displayed until communication and initialization is complete.

Then the power key icon screen will display until the ADM power on/off button is pressed for the first time after system power-up.

To begin using the ADM, the machine must be active. To verify the machine is active, verify that the System Status Indicator Light is illuminated green, see Advanced Display Module (ADM), page 22. If the System Status Indicator Light is not green, press the ADM Power On/Off button. The System Status Indicator Light will illuminate yellow if the machine is disabled.

Perform the following tasks to fully setup your system.

1. Set pressure values for the Pressure Imbalance Alarm to activate. See System Screen 1, page 37.
2. Enter, enable, or disable recipes. See Recipes Screen, page 37.
3. Set general system settings. See Advanced Screen 1 — General, page 36.
4. Set units of measure. See Advanced Screen 2 — Units, page 36.
5. Set USB settings. See Advanced Screen 3— USB, page 36.
7. Set component A and component B supply levels. See Maintenance, page 41.
Setup Mode

The ADM will start in the Run screens at the Home screen. From the Run screens, press \( \text{F} \) to access the Setup screens. The system defaults with no password, entered as 0000. Enter the current password then press \( \text{F} \). Press \( \text{F} \) to navigate through the Setup Mode screens (see Navigating the Screens, page 24).

Set Password

Set a password to allow Setup screen access, see Advanced Screen 1 – General, page 36. Enter any number from 0001 to 9999. To remove the password, enter the current password in the Advanced Screen – General screen and change the password to 0000.

From the Setup screens, press \( \text{F} \) to return to the Run screens.
Advanced Display Module (ADM) Operation

Advanced Setup Screens

Advanced setup screens enable users to set units, adjust values, set formats, and view software information for each component. Press \[ \text{Up, Down, Left, Right} \] to scroll through the Advanced setup screens. Once in the desired Advanced setup screen, press \[ \text{Enter} \] to access the fields and make changes. When changes are complete press \[ \text{Enter} \] to exit edit mode.

**NOTE:** Users must be out of edit mode to scroll through the Advanced setup screens.

Advanced Screen 1 — General

Use this screen to set the language, date format, current date, time, setup screens password (0000 – for none) or (0001 to 9999), and screen saver delay (zero equals screen saver off).

**Advanced Screen 2 — Units**

Use this screen to set the temperature units, pressure units, volume units, and cycle units (pump cycles or volume).

**Advanced Screen 3 — USB**

Use this screen to enable USB downloads/uploads, enable a logs 90% full advisory, enter the maximum number of days to download data, enable specifying date range of data to download, and how frequently USB logs are recorded. See USB Data, page 62.

**Advanced Screen 4 — Software**

This screen displays the software part number and software version for the Advanced Display Module, USB Configuration, Hydraulic Control Module, and Temperature Control Module, and Remote Display Module (optional).
Advanced Display Module (ADM) Operation

System 1

Use this screen to set the activation pressure for the Pressure Imbalance Alarm and Deviation, enable or disable diagnostic screens, set the maximum and minimum drum volume, and enable drum alarms.

System 2

Use this screen to enable Manual Hose Mode and inlet sensors, as well as setting the inlet sensor low pressure alarm and low temperature deviation. Manual Hose Mode disables the hose temperature RTD sensor so the system can operate if the sensors were to malfunction (see Manual Hose Heat Mode, page 52 for more information). Default settings are 10 psi (0.07 MPa, 0.7 bar) for low inlet pressure alarm and 50°F (10°C) for low inlet temperature deviation.

System 3

Use this screen to enable alternate pump cylinder sizes, to turn motor standby mode on and off, and to enable recirculation cycle count. Cycles below 700 psi outlet pressure will not be counted unless enabled.

Recipes

Use this screen to add recipes, view saved recipes, and enable or disable saved recipes. Enabled recipes can be selected at the Home Run Screen. 24 recipes can be displayed on the three recipe screens.
Add Recipe

1. Press \( \uparrow \) and then use \( \uparrow \downarrow \) to select a recipe field. Press \( \Rightarrow \) to enter a recipe name (maximum 16 characters). Press \( \Rightarrow \) to clear the old recipe name.

2. Use \( \leftrightarrow \) to highlight the next field and use the number pad to enter a value. Press \( \leftarrow \) to save.

Enable or Disable Recipes

1. Press \( \uparrow \) and then use \( \uparrow \downarrow \) to select the recipe that needs to be enabled or disabled.

2. Use \( \leftrightarrow \) to highlight the enabled check box. Press \( \leftrightarrow \) to enable or disable the recipe.
Run Mode

The ADM will start in the Run screens at the "Home" screen. Press \( \leftarrow \rightarrow \) to navigate through the Run Mode screens. See Run Screens Navigation Diagram, page 44.

From the Run screens, press \( \downarrow \) to access the Setup screens.

Run Screens Navigation Diagram
Figure 9
Advanced Display Module (ADM) Operation

Home — System Off

This is the home screen when the system is off. This screen displays actual temperatures, actual pressures at the fluid manifold, and number of cycles.

Home — System Active

When the system is active, the home screen displays actual temperature for heat zones, actual pressures at the fluid manifold, the number of cycles, along with all associated control soft keys.

Use this screen to turn on heat zones, start the proportioner, stop the proportioner, park the component A pump, and clear cycles.

NOTE: Screen shown displays inlet sensor temperatures and pressures. These will not be shown on models without inlet sensors.

Home — System With Error

Active errors are shown in the status bar. The error code, alarm bell, and description of the error will scroll in the status bar.

1. Press to acknowledge the error.
2. See Troubleshooting, page 42 for corrective action.

Targets

Use this screen to define the setpoints for the A Component Temperature, B Component Temperature, heated hose temperature, and pressure.

Maximum A and B temperature: 190°F (88°C)

Maximum heated hose temperature: the lesser of 10°F (5°C) above the highest A or B temperature setpoint or 180°F (82°C).

Note

If the remote display module kit is used, these setpoints can be modified at the gun.
**Maintenance**

Use this screen to view daily and lifetime cycles or gallons that have been pumped and gallons or liters remaining in the drums.

The lifetime value is the number of pump cycles or gallons since the first time the ADM was turned on. The daily value automatically resets at midnight. The manual value is the counter that can be manually reset. Press and hold to reset manual counter.

**Cycles**

This screen shows daily cycles and gallons that have been sprayed for the day. All information listed on this screen can be downloaded on a USB flash drive. To download logs, see Download Procedure, page 62.

**Events**

This screen shows the date, time, event code, and description of all events that have occurred on the system. There are 10 pages, each holding 10 events. The 100 most recent events are shown. See System Events, page 44 for event code descriptions. See Error Codes and Troubleshooting, page 62 for error code descriptions.

All events and errors listed on this screen can be downloaded on a USB flash drive. To download logs, see Download Procedure, page 62.

**Errors**

This screen shows the date, time, error code, and description of all errors that have occurred on the system. All errors listed on this screen can be downloaded on a USB flash drive. To download logs, see Download Procedure, page 62.
Troubleshooting

This screen displays the last ten errors that occurred on the system. Use the up and down arrows to select an error and press to view the QR code for the selected error. Press to access the QR code screen for an error code that is not listed on this screen. See Error Codes and Troubleshooting, page 62, for more information on error codes.

QR Codes

To quickly view online help for a given error code, scan the displayed QR code with your smartphone. Alternately, visit http://help.graco.com and search for the error code to view online help for that code.
**Diagnostic**

Use this screen to view information for all system components. NOTE: If not visible, this screen may be on the Setup Systems screen (see Setup Mode).

The following information is displayed:

**Temperature**
- A Chemical
- B Chemical
- Hose Chemical
- TCM PCB — temperature control module temperature

**Amps**
- A Current
- B Current
- Hose Current

**Volts**
- A Voltage
- B Voltage
- Hose Voltage

**Pressure**
- Pressure A — chemical
- Pressure B — chemical

**Cycles**
- CPM — cycles per minute
- Total Cycles — lifetime cycles

---

**Job Data**

Use this screen to enter a job name or number.

**Recipes**

Use this screen to select an enabled recipe. Use the up and down arrows to highlight a recipe and press to load. The currently loaded recipe is outlined by a green box.

NOTE: This screen will not display if there are not any enabled recipes. To enable or disable recipes, see Recipes, page 37.
## System Events

Use the table below to find a description for all system non-error events. All events are logged in the USB log files.

<table>

Startup

To prevent serious injury, only operate Reactor with all covers and shrouds in place.

**NOTICE**

Proper system setup, startup, and shutdown procedures are critical to electrical equipment reliability. The following procedures ensure steady voltage. Failure to follow these procedures will cause voltage fluctuations that can damage electrical equipment and void the warranty.

1. **Check fluid inlet filter screens.**
   Before daily startup, ensure that the fluid inlet screens are clean. See Fluid Inlet Strainer Screens, page 58.

2. **Check ISO lubrication reservoir.**
   Check level and condition of ISO lube daily. See Pump Lubrication System, page 60.

3. Use A and B Drum Level Sticks (24M174) to measure the material level in each drum. If needed, the level can be entered and tracked in the ADM. See Advanced Setup Screens, page 36.

4. **Check generator fuel level.**

   **NOTICE**
   Running out of fuel will cause voltage fluctuations that can damage electrical equipment and void the warranty. Do not run out of fuel.

5. Confirm main power switch is OFF before starting generator.

6. Ensure the main breaker on the generator is in the off position.

7. Start the generator. Allow it to reach full operating temperature.

8. **Turn main power switch ON.**

   The ADM will display the following screen until communication and initialization is complete.
9. Switch on the air compressor, air dryer, and breathing air, if included.

10. **For first startup of new system, load fluid with feed pumps.**
   a. Check that all Setup steps are complete. See Setup Mode.
   b. If an agitator is used, open the agitator’s air inlet valve.
   c. If you need to circulate fluid through the system to preheat the drum supply, see Circulation Through Reactor, page 48. If you need to circulate material through the heat hose to the gun manifold, see Circulation Through Gun Manifold, page 49.
   d. Turn both PRESSURE RELIEF/SPRAY valves (SA, SB) to SPRAY.
   e. Open fluid inlet valves (FV). Check for leaks.
   f. Hold gun fluid manifold over two grounded waste containers. Open fluid valves A and B until clean, air-free fluid comes from valves. Close valves.

Cross-contamination can result in cured material in fluid lines which could cause serious injury or damage equipment. To prevent cross-contamination:
- **Never** interchange component A and component B wetted parts.
- Never use solvent on one side if it has been contaminated from the other side.
- Always provide two grounded waste containers to keep component A and component B fluids separate.

The Fusion AP gun manifold is shown.
11. Press \( \text{Power Button} \) to activate ADM.

13. Preheat the system:
   a. Press \( \text{Heat Zone On/Off Button} \) to turn on hose heat zone.

   This equipment is used with heated fluid which can cause equipment surfaces to become very hot. To avoid severe burns:
   - Do not touch hot fluid or equipment.
   - Do not turn on hose heat without fluid in hoses.
   - Allow equipment to cool completely before touching it.
   - Wear gloves if fluid temperature exceeds 110°F (43°C).

   Thermal expansion can cause over-pressurization, resulting in equipment rupture and serious injury, including fluid injection. Do not pressurize system when preheating hose.

   b. If you need to circulate fluid through the system to preheat the drum supply, see Circulation Through Reactor, page 48. If you need to circulate material through the heat hose to the gun manifold, see Circulation Through Gun Manifold, page 49.

   c. Wait for the hose to reach set point temperature.

   NOTE: Hose heat-up time may increase at voltages less than nominal 230 VAC when maximum hose length is used.

   d. Press \( \text{Heat Zone On/Off Button} \) to turn on A and B heat zones.
Fluid Circulation

Circulation Through Reactor

**NOTICE**
To prevent equipment damage, do not circulate fluid containing a blowing agent without consulting with your material supplier regarding fluid temperature limits.

**NOTE:** Optimum heat transfer is achieved at lower fluid flow rates with temperature set points at desired drum temperature. Low temperature rise deviation errors may result.

To circulate through gun manifold and preheat hose, see Circulation Through Gun Manifold, page 49.

1. Follow Startup, page 45.

To avoid injection injury and splashing, do not install shutoffs downstream of the PRESSURE RELIEF/SPRAY valve outlets (BA, BB). The valves function as overpressure relief valves when set to SPRAY. Lines must be open so valves can automatically relieve pressure when machine is operating.

2. See Typical Installation, with system fluid manifold to drum circulation, page 17. Route circulation lines back to respective component A or B supply drum. Use hoses rated for the maximum working pressure of this equipment. See Technical Specifications.

3. Set PRESSURE RELIEF/SPRAY valves (SA, SB) to PRESSURE RELIEF/CIRCULATION.

5. Before starting the motor, unlock the hydraulic compensator knob, then rotate counter-clockwise until it ceases to move.

6. Press motor to start motor and pumps. Circulate fluid at lowest possible pressure until temperatures reach targets.

7. Press to turn on the hose heat zone.

8. Turn on the A and B heat zones. Wait until the fluid inlet valve temperature gauges (FTG) reach the minimum chemical temperature from the supply drums.

9. Turn off motor.

10. Set PRESSURE RELIEF/SPRAY valves (SA, SB) to SPRAY.
Circulation Through Gun Manifold

**NOTICE**

To prevent equipment damage, do not circulate fluid containing a blowing agent without consulting with your material supplier regarding fluid temperature limits.

**NOTE:** Optimum heat transfer is achieved at lower fluid flow rates with temperature set points at desired drum temperature. Low temperature rise deviation errors may result.

Circulating fluid through the gun manifold allows rapid preheating of the hose.

1. Install gun fluid manifold (P) on accessory circulation kit (CK). Connect high pressure circulation lines (R) to circulation manifold.

![Diagram showing the installation of the gun fluid manifold](image)

*The Fusion AP gun manifold is shown.*

<table>
<thead>
<tr>
<th>CK</th>
<th>Gun</th>
<th>Manual</th>

</thead>
<tbody>
<tr>
<td>246362</td>
<td>Fusion AP</td>
<td>309818</td>
</tr>
<tr>
<td>256566</td>
<td>Fusion CS</td>
<td>313058</td>
</tr>
</tbody>
</table>

2. Route circulation lines back to respective component A or B supply drum. Use hoses rated for the maximum working pressure of this equipment. See *Technical Specifications*.

3. Follow procedures from *Startup, page 45*.

4. Turn main power switch on.

5. Set temperature targets. See *Targets, page 40*.

6. Before starting the motor, unlock the hydraulic compensator knob, then rotate counter-clockwise until it ceases to move.

7. Press motor to start motor and pumps. Circulate fluid at lowest possible pressure until temperatures reach targets.

8. Press to turn on the hose heat zone.

9. Turn on the A and B heat zones. Wait until the fluid inlet valve temperature gauges (FTG) reach the minimum chemical temperature from the supply drums.

10. Turn off motor.
Spraying

The Fusion AP gun is shown.

1. Engage gun piston safety lock and close gun fluid inlet valves A and B.

3. Adjust the gun air pressure. Do not exceed 130 psi (0.2 MPa, 2 bar).

4. Set PRESSURE RELIEF/SPRAY valves (SA, SB) to SPRAY.

5. Verify heat zones are on and temperatures are on target, see Home — System Off, page 40.

6. Open fluid inlet valve (FV) located at each pump inlet.

7. Press \( \text{start} \) to start motor and pumps.

8. Adjust pressure compensator knob to desired fluid stall pressure. Turn knob clockwise to increase pressure and counter-clockwise to decrease pressure. Use hydraulic pressure gauge (HPG) to view hydraulic pressure. Once desired fluid stall pressure is set, lock the knob in place by rotating lower portion clockwise until tight.

Component A and B outlet pressures will be higher than the hydraulic set pressure, depending on the model. Component A and B (GA, GB) pressure may be viewed on the pressure gauges or the ADM.
9. Check fluid pressure gauges (GA, GB) to ensure proper pressure balance. If imbalanced, reduce pressure of higher component by slightly turning PRESSURE RELIEF/SPRAY valve for that component toward PRESSURE RELIEF/CIRCULATION until gauges show balanced pressures.

10. Open gun fluid inlet valves A and B.

11. Disengage gun piston safety lock.

12. Pull gun trigger to test spray onto cardboard. If necessary, adjust pressure and temperature to get desired results.

**Spray Adjustments**

Flow rate, atomization, and amount of overspray are affected by four variables.

- **Fluid pressure setting.** Too little pressure results in an uneven pattern, coarse droplet size, low flow, and poor mixing. Too much pressure results in excessive overspray, high flow rates, difficult control, and excessive wear.

- **Fluid temperature.** Similar effects to fluid pressure setting. The A and B temperatures can be offset to help balance the fluid pressure.

- **Mix chamber size.** Choice of mix chamber is based on desired flow rate and fluid viscosity.

- **Clean-off air adjustment.** Too little clean-off air results in droplets building up on the front of the nozzle, and no pattern containment to control overspray. Too much clean-off air results in air-assisted atomization and excessive overspray.

---

**NOTICE**

To prevent material crossover on impingement guns, **never** open fluid manifold valves or trigger gun if pressures are imbalanced.
Spraying

**Manual Hose Heat Mode**

If the system produces the T6DH Sensor Error Hose alarm or the T6DT Sensor Error TCM alarm, use manual hose heat mode until the hose RTD cable or FTS temperature sensor can be repaired.

Do not use Manual Hose Mode for extended periods of time. The system performs best when the hose has a valid RTD signal and can operate in temperature control mode. If a hose RTD breaks, the first priority is to fix the RTD. Manual Hose Mode can help finish a job while waiting for repair parts.

   **NOTE:** When manual hose mode is enabled, the manual hose mode advisory EVCH-V will appear.

4. Enter Run Mode and navigate to the Target screen. Use the up and down arrows to set the desired hose current.

   **Hose Current Settings**

<table>
<thead>
<tr>
<th>Settings</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Default</td>
<td>20A</td>
</tr>
<tr>
<td>Maximum</td>
<td>37A</td>
</tr>
</tbody>
</table>

---

**Enable Manual Hose Mode**

1. Disconnect the hose RTD sensor from the TCM.

2. Enter Setup Mode and navigate to System Screen 2.
5. Navigate back to the Run Mode Home screen. The hose now displays a current instead of a temperature.

NOTE: Until the RTD sensor is repaired, the T6DH sensor error alarm will display each time the system is powered up.

Disable Manual Hose Mode

1. Enter Setup Mode and navigate to System 2 Screen and deselect Enable Manual Hose Mode, or repair the hose RTD cable or FTS.

2. Manual hose mode is automatically disabled when the system detects a valid RTD sensor in the hose.
Standby

If you stop spraying for a period of time, the unit will enter standby by shutting down the electric motor and hydraulic pump, to reduce equipment wear and minimize heat buildup. The pump icon on the ADM Home screen will flash when in standby.

**NOTE:** The A, B, and Hose heat zones will not shut off during standby.

To restart, spray off target for two seconds. The system will sense the pressure drop and the motor will ramp up to full speed in a few seconds.

**NOTE:** This feature is disabled from the factory.

To activate or deactivate standby:

1. Enter setup mode by pressing on the ADM.
2. Go to screen System 3 and select to enter the page for editing.

**Shutdown**

**NOTICE**

Proper system setup, startup, and shutdown procedures are critical to electrical equipment reliability. The following procedures ensure steady voltage. Failure to follow these procedures will cause voltage fluctuations that can damage electrical equipment and void the warranty.

1. Press to stop the pumps.
2. Turn off all heat zones.
3. Select the “Standby Idle Time” drop down using and the arrow keys. Select the desired delay using and the arrow keys. Press enter to select the desired value.
4. Exit the page and return to run mode by pressing , then .
5. Press to deactivate the system.
6. Turn off the air compressor, air dryer, and breathing air.

7. Turn main power switch OFF.

8. Close all fluid supply valves.

9. Set PRESSURE RELIEF/SPRAY valves to SPRAY to seal out moisture from the drain line.

10. Engage gun piston safety lock then close fluid inlet valves A and B.

---

**Pressure Relief Procedure**

Follow the Pressure Relief Procedure whenever you see this symbol.

This equipment stays pressurized until pressure is manually relieved. To help prevent serious injury from pressurized fluid, such as skin injection, splashing fluid and moving parts, follow the Pressure Relief Procedure when you stop spraying and before cleaning, checking, or servicing equipment.

*The Fusion AP gun is shown.*

1. Press [ ] to stop the pumps.
2. Turn off all heat zones.
3. Relieve pressure in gun and perform gun shutdown procedure. See gun manual.
4. Close gun fluid inlet valves A and B.
5. Shut off feed pumps and agitator, if used.
Pressure Relief Procedure

6. Route fluid to waste containers or supply tanks. Turn PRESSURE RELIEF/SPRAY valves (SA, SB) to PRESSURE RELIEF/CIRCULATION. Ensure gauges drop to 0.

7. Engage gun piston safety lock.

8. Disconnect gun air line and remove gun fluid manifold.
Flushing

To avoid fire and explosion:

- Flush equipment only in a well-ventilated area.
- Ensure main power is off and heater is cool before flushing.
- Do not turn on heater until fluid lines are clear of solevent.

To flush feed hoses, pumps, and heaters separately from heated hoses, set PRESSURE RELIEF/SPRAY valves (SA, SB) to PRESSURE RELIEF/CIRCULATION. Flush through bleed lines (N).

To flush entire system, circulate through gun fluid manifold (with manifold removed from gun).

To prevent moisture from reacting with isocyanate, always leave the system filled with a moisture-free plasticizer or oil. Do not use water. Never leave the system dry. See Important Two-Component Material Information, page 7.
Prior to performing any maintenance procedures, follow Pressure Relief Procedure, page 55.

Preventative Maintenance Schedule

The operating conditions of your particular system determine how often maintenance is required. Establish a preventive maintenance schedule by recording when and what kind of maintenance is needed, and then determine a regular schedule for checking your system.

- Inspect hydraulic and fluid lines for leaks daily.
- Clean up all hydraulic leaks; identify and repair the cause of the leak.
- Inspect fluid inlet strainer screens daily. See below.
- Keep component A from exposure to moisture to prevent crystallization.
- Check hydraulic fluid level weekly. Check hydraulic fluid level on a dipstick. Fluid level must be between indent marks on dipstick. Refill as required with approved hydraulic fluid, see Technical Specifications and the Approved Anti-Wear (AW) Hydraulic Oils table in the Reactor Repair-Parts manual 334946. If fluid is dark in color, change fluid and filter.

Table 6 Frequency of Oil Changes

<table>
<thead>
<tr>
<th>Ambient Temperature</th>
<th>Recommended Frequency</th>

</tbody>
</table>

Proportioner Maintenance

Fluid Inlet Strainer Screens

Inspect fluid inlet strainer screens daily, see Fluid Inlet Strainer Screens, page 58.

Grease Circulation Valves

Grease circulation valves (SA and SB) with Fusion grease (117773) weekly.

ISO Lubricant Level

Inspect ISO lubricant level and condition daily. Refill or replace as needed. See Pump Lubrication System, page 60.

Moisture

To prevent crystallization, do not expose component A to moisture in air.

Gun Mix Chamber Ports

Clean gun mix chamber ports regularly. See gun manual.

• Change break-in oil in a new unit after the first 250 hours of operation or within 3 months, whichever comes first. See the table below for recommended frequency of oil changes.
**Gun Check Valve Screens**

Clean gun check valve screens regularly. See gun manual.

**Dust Protection**

Use clean, dry, oil-free compressed air to prevent dust buildup on control modules, fans, and motor (under shield).

**Vent Holes**

Keep vent holes on bottom and back of electrical enclosure and sides and back of transformer enclosure open.

**Flush Inlet Strainer Screen**

The inlet strainers filter out particles that can plug the pump inlet check valves. Inspect the screens daily as part of the startup routine, and clean as required.

Isocyanate can crystallize from moisture contamination or from freezing. If the chemicals used are clean and proper storage, transfer, and operating procedures are followed, there should be minimal contamination of the A-side screen.

**Note**

Clean the A-side screen only during daily startup. This minimizes moisture contamination by immediately flushing out any isocyanate residue at the start of dispensing operations.

1. Close the fluid inlet valve at the pump inlet and shut off the appropriate feed pump. This prevents material from being pumped while cleaning the screen.

2. Place a container under the strainer base to catch drain off when removing the strainer plug (C).

3. Remove the screen (A) from the strainer manifold. Thoroughly flush the screen with compatible solvent and shake it dry. Inspect the screen. No more than 25% of the mesh should be restricted. If more than 25% of the mesh is blocked, replace the screen. Inspect the gasket (B) and replace as required.

4. Ensure the pipe plug (D) is screwed into the strainer plug (C). Install the strainer plug with the screen (A) and o-ring (B) in place and tighten. Do not overtighten. Let the o-ring make the seal.

5. Open the fluid inlet valve, ensure that there are no leaks, and wipe the equipment clean. Proceed with operation.

![Figure 10](image-url)
Pump Lubrication System

Check the condition of the ISO pump lubricant daily. Change the lubricant if it becomes a gel, its color darkens, or it becomes diluted with isocyanate.

Gel formation is due to moisture absorption by the pump lubricant. The interval between changes depends on the environment in which the equipment is operating. The pump lubrication system minimizes exposure to moisture, but some contamination is still possible.

Lubricant discoloration is due to continual seepage of small amounts of isocyanate past the pump packings during operation. If the packings are operating properly, lubricant replacement due to discoloration should not be necessary more often than every 3 or 4 weeks.

To change pump lubricant:

1. Follow Pressure Relief Procedure, page 55.
2. Lift the lubricant reservoir (LR) out of the bracket (RB) and remove the container from the cap. Holding the cap over a suitable container, remove the check valve and allow the lubricant to drain. Reattach the check valve to the inlet hose.
3. Drain the reservoir and flush it with clean lubricant.
4. When the reservoir is flushed clean, fill with fresh lubricant.
5. Thread the reservoir onto the cap assembly and place it in the bracket.
6. Push the larger diameter supply (ST) tube approximately 1/3 of the way into the reservoir.
7. Push the smaller diameter return tube (RT) into the reservoir until it reaches the bottom. **NOTE:** The return tube must reach the bottom of the reservoir to ensure that isocyanate crystals will settle to the bottom and not be siphoned into the supply tube and returned to the pump.
8. The lubrication system is ready for operation. No priming is required.
Errors

View Errors

When an error occurs the error information screen displays the active error code and description.

The error code, alarm bell, and active errors will scroll in the status bar. For a list of the ten most recent errors, see Troubleshooting, page 42. Error codes are stored in the error log and displayed on the Error and Troubleshooting screens on the ADM.

There are three types of errors that can occur. Errors are indicated on the display as well as by the light tower (optional).

Alarms are indicated by 🚨. This condition indicates a parameter critical to the process has reached a level requiring the system to stop. The alarm needs to be addressed immediately.

Deviations are indicated by 🚸. This condition indicates a parameter critical to the process has reached a level requiring attention, but not sufficient enough to stop the system at this time.

Advisories are indicated by 📀. This condition indicates a parameter that is not immediately critical to the process. The advisory needs attention to prevent more serious issues in the future.

To diagnose the active error, see Troubleshoot Errors, page 61.

Troubleshoot Errors

To troubleshoot the error:

1. Press the soft key next to “Help With This Error” for help with the active error.

   ![QR Code Screen]

   Help With This Error--

   Note

   Press 🔄 or 🖕 to return to the previously displayed screen.

2. The QR code screen will be displayed. Scan the QR code with your smartphone to be sent directly to online troubleshooting for the active error code. Otherwise, manually navigate to http://help.graco.com and search for the active error.

   ![QR Code Image]

3. If no internet connection is available, see Error Codes and Troubleshooting, page 62 for causes and solutions for each error code.
Error Codes and Troubleshooting

See system repair manual 334946 or visit http://help.graco.com for causes and solutions to each error code, or call your Graco contact listed on the back page of this manual.

USB Data

**Download Procedure**

**NOTE:** System configuration setting files and custom language files can be modified if the files are in the UPLOAD folder of the USB flash drive. See System Configuration Settings File, Custom Language File, and Upload Procedure sections.

1. Insert USB flash drive into USB port.
2. The menu bar and USB indicator lights indicate that the USB is downloading files. Wait for USB activity to complete.
3. Remove USB flash drive from USB port.
4. Insert USB flash drive into USB port of computer.
5. The USB flash drive window automatically opens. If it does not, open USB flash drive from within Windows® Explorer.
6. Open GRACO folder.
7. Open the system folder. If downloading data from more than one system, there will be more than one folder. Each folder is labeled with the corresponding serial number of the ADM (The serial number is on the back of the ADM.)
8. Open DOWNLOAD folder.
9. Open DATAxxxx folder labeled with the highest number. The highest number indicates the most recent data download.
10. Open log file. Log files open in Microsoft® Excel by default as long as the program is installed. However, they can also be opened in any text editor or Microsoft® Word.

**NOTE:** All USB logs are saved in Unicode (UTF-16) format. If opening the log file in Microsoft Word, select Unicode encoding.

USB Logs

**NOTE:** The ADM can read/write to FAT (File Allocation Table) storage devices. NTFS, used by 32 GB or greater storage devices, is not supported.

During operation, the ADM stores system and performance related information to memory in the form of log files. The ADM maintains six log files:

- Event Log
- Job Log
- Daily Log
- System Software Log
- Blackbox Log
- Diagnostics Log

Follow **Download Procedure**, page 62, to retrieve log files.

Each time a USB flash drive is inserted into the ADM USB port, a new folder named DATAxxxx is created. The number at the end of the folder name increases each time a USB flash drive is inserted and data is downloaded or uploaded.

**Event Log**

The event log file name is 1–EVENT.CSV and is stored in the DATAxxxx folder.

The event log maintains a record of the last 49,000 events and errors. Each event record contains:

- Date of event code
- Time of event code
- Event code
- Event type
- Action taken
- Event Description

Event codes include both error codes (alarms, deviations, and advisories) and record only events.

Actions Taken includes setting and clearing event conditions by the system, and acknowledging error conditions by the user.
Job Log

The job log file name is 2–JOB.CSV and is stored in the DATAx xxx folder.

The job log maintains a record of data points based on the USB Log Frequency defined in the Setup screens. The ADM stores the last 237,000 data points for download. See Advanced Setup Screens, page 36, for information on setting the Download Depth and USB Log Frequency.

- Data point date
- Data point time
- A side temperature
- B side temperature
- Hose temperature
- A side temperature setpoint
- B side temperature setpoint
- Hose temperature setpoint
- Pressure A
- Pressure B
- A side inlet pressure (Elite only)
- B side inlet pressure (Elite only)
- A side inlet temperature (Elite only)
- B side inlet temperature (Elite only)
- Inlet pressure setpoint
- System lifetime pump cycle counts
- Usage Volume (manual)
- Pressure, volume, and temperature units
- Job name/number

Daily Log

The daily log file name is 3–DAILY.CSV and is stored in the DATAx xxx folder.

The daily log maintains a record of the total cycle and volume sprayed on any day that the system is powered up. The volume units will be the same units that were used in the Job Log.

The following data is stored in this file:
- Date that material was sprayed
- Time — unused column
- Total pump cycle count for day
- Total volume sprayed for day

System Software Log

The system software file name is 4–SYSTEM.CSV and is stored in the DATAx xxx folder.

The system software log lists the following:
- Date log was created
- Time log was created
- Component name
- Software version loaded on the above component

Blackbox Log File

The black box file name is 5–BLACKB.CSV and is stored in the DATAx xxx folder.

The Blackbox log maintains a record of how the system runs and the features that are used. This log will help Graco troubleshoot system errors.

Diagnostics Log File

The diagnostics file name is 6–DIAGNO.CSV and is stored in the DATAx xxx folder.

The Diagnostics log maintains a record of how the system runs and the features that are used. This log will help Graco troubleshoot system errors.

System Configuration Settings

The system configuration settings file name is SETTINGS.TXT and is stored in the DOWNLOAD folder.

A system configuration settings file automatically downloads each time a USB flash drive is inserted into the ADM. Use this file to back up system settings for future recovery or to easily replicate settings across multiple systems. Refer to the Upload Procedure, page 64 for instructions on how to use this file.
Custom Language File

The custom language file name is DISPTEXT.TXT and is stored in the DOWNLOAD folder.

A custom language file automatically downloads each time a USB flash drive is inserted into the ADM. If desired, use this file to create a user-defined set of custom language strings to be displayed within the ADM.

The system is able to display the following Unicode characters. For characters outside of this set, the system will display the Unicode replacement character, which appears as a white question mark inside of a black diamond.

- U+0020 - U+007E (Basic Latin)
- U+00A1 - U+00FF (Latin-1 Supplement)
- U+0100 - U+017F (Latin Extended-A)
- U+0386 - U+03CE (Greek)
- U+0400 - U+045F (Cyrillic)

Create Custom Language Strings

The custom language file is a tab-delimited text file that contains two columns. The first column consists of a list of strings in the language selected at the time of download. The second column can be used to enter the custom language strings. If a custom language was previously installed, this column contains the custom strings. Otherwise the second column is blank.

Modify the second column of the custom language file as needed, and then follow the Upload Procedure, page 64 to install the file.

The format of the custom language file is critical. The following rules must be followed in order for the installation process to succeed.

- Define a custom string for each row in the second column.
  **NOTE:** If the custom language file is used, you must define a custom string for each entry in the DISPTEXT.TXT file. Blank second-column fields will be displayed blank on the ADM.
- The file name must be DISPTEXT.TXT.
- The file format must be a tab-delimited text file using Unicode (UTF-16) character representation.
- The file must contain only two columns, with columns separated by a single tab character.
- Do not add or remove rows from the file.
- Do not change the order of the rows.

Upload Procedure

Use this procedure to install a system configuration file and/or a custom language file.

1. If necessary, follow the Download Procedure to automatically generate the proper folder structure on the USB flash drive.
2. Insert USB flash drive into USB port of computer.
3. The USB flash drive window automatically opens. If it does not, open USB flash drive from within Windows Explorer.
4. Open GRACO folder.
5. Open the system folder. If working with more than one system, there will be more than one folder within the GRACO folder. Each folder is labeled with the corresponding serial number of the ADM. (The serial number is on the back of the ADM.)
6. If installing the system configuration settings file, place SETTINGS.TXT file into the UPLOAD folder.
7. If installing the custom language file, place DISPTEXT.TXT file into the UPLOAD folder.
8. Remove USB flash drive from the computer.
9. Install USB flash drive into the ADM USB port.
10. The menu bar and USB indicator lights indicate that the USB is downloading files. Wait for USB activity to complete.
11. Remove USB flash drive from USB port.

**NOTE:** If the custom language file was installed, users can now select the new language from the Language drop-down menu in Advanced Screen 1 — General, page 36.
Performance Charts

Use this chart to help identify the proportioner that will work most efficiently with each mix chamber. Flow rates are based on a material viscosity of 60 cps.

NOTICE
To prevent system damage, do not pressurize the system above the line for the gun tip size being used.

Graco Extended Warranty

Graco warrants all equipment referenced in this document which is manufactured by Graco and bearing its name to be free from defects in material and workmanship on the date of sale to the original purchaser for use. Graco will, for a period as defined in the table below from the date of sale, repair or replace any part of the equipment determined by Graco to be defective. This warranty applies only when the equipment is installed, operated and maintained in accordance with Graco’s written recommendations.

<table>

This warranty does not cover, and Graco shall not be liable for general wear and tear, or any malfunction, damage or wear caused by faulty installation, misapplication, abrasion, corrosion, inadequate or improper maintenance, negligence, accident, tampering, or substitution of non-Graco component parts. Nor shall Graco be liable for malfunction, damage or wear caused by the incompatibility of Graco equipment with structures, accessories, equipment or materials not supplied by Graco, or the improper design, manufacture, installation, operation or maintenance of structures, accessories, equipment or materials not supplied by Graco.

This warranty is conditioned upon the prepaid return of the equipment claimed to be defective to an authorized Graco distributor for verification of the claimed defect. If the claimed defect is verified, Graco will repair or replace free of charge any defective parts. The equipment will be returned to the original purchaser transportation prepaid. If inspection of the equipment does not disclose any defect in material or workmanship, repairs will be made at a reasonable charge, which charges may include the costs of parts, labor, and transportation.

**THIS WARRANTY IS EXCLUSIVE, AND IS IN LIEU OF ANY OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTY OF MERCHANTABILITY OR WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE.**

Graco’s sole obligation and buyer’s sole remedy for any breach of warranty shall be as set forth above. The buyer agrees that no other remedy (including, but not limited to, incidental or consequential damages for lost profits, lost sales, injury to person or property, or any other incidental or consequential loss) shall be available. Any action for breach of warranty must be brought within two (2) years of the date of sale.

**GRACO MAKES NO WARRANTY, AND DISCLAIMS ALL IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, IN CONNECTION WITH ACCESSORIES, EQUIPMENT, MATERIALS OR COMPONENTS SOLD BUT NOT MANUFACTURED BY GRACO.**

These items sold, but not manufactured by Graco (such as electric motors, switches, hose, etc.), are subject to the warranty, if any, of their manufacturer. Graco will provide purchaser with reasonable assistance in making any claim for breach of these warranties. In no event will Graco be liable for indirect, incidental, special or consequential damages resulting from Graco supplying equipment hereunder, or the furnishing, performance, or use of any products or other goods sold hereto, whether due to a breach of contract, breach of warranty, the negligence of Graco, or otherwise.

**FOR GRACO CANADA CUSTOMERS**

The Parties acknowledge that they have required that the present document, as well as all documents, notices and legal proceedings entered into, given or instituted pursuant hereto or relating directly or indirectly hereto, be drawn up in English. Les parties reconnaissent avoir convenu que la rédaction du présent document sera en Anglais, ainsi que tous documents, avis et procédures judiciaires exécutés, donnés ou intentés, à la suite de ou en rapport, directement ou indirectement, avec les procédures concernées.
